Foreword

At the Foreign Ministers meeting of Brazil, Russia, India and China during the 64th General Assembly of the United Nations, held in New York in September, 2009, a strong need was felt to put on a single platform all the important data of all these 4 Countries and then disseminate the same for mutual benefit of all these countries. As such, the first edition of BRIC Joint Statistical Publication (JSP) was borne in 2010. At the same time, as requested by the Ministry of Foreign Affairs of China, the National Bureau of Statistics of China compiled the Chinese version exactly the same as in the English one in contents, based on the English version. From then on, every year, one of these BRICS countries brings out this publication. At the end of 2010, South Africa joined this association then called BRICS, i.e., Brazil, Russia, India, China and South Africa. Last year, Year 2016 Edition which was the seventh issue of this publication was brought out by India, and this year, the present issue which is the eighth issue of this annual publication has been brought out by China. In this very edition, some of the sustainable development indicators are added as proposed by the National Bureau of Statistics of China and agreed by all the other countries. These newly added indicators are from the Indicators and Monitoring Framework for the 2030 Agenda for Sustainable Development, presenting the great achievements obtained by BRICS countries in their social and economic development.

Publication 2017 includes 15 chapters: The first chapter is a summary of the entire publication, presenting general information with comparable statistics of the five countries, while the other 14 chapters reflect the different aspects of the past development and current status of the individual countries. In each of the last 14 chapters, there are two components, a summary table with graphs followed by country tables. The summary table and graphs present the most comparable information among the five countries while the country tables show more detailed information specific to the individual countries. We fully hope that this edition will be highly useful to all the stakeholders.

Roberto Luis Olinto Ramos President Brazilian Institute of Geography and Statistics [IBGE]

> Alexander Surinov Head Federal State Statistics Service of the Russian Federation [ROSSTAT]

> > Dr. T C A Anant Chief Statistician of India

Ning Jizhe Commissioner National Bureau of Statistics of China [NBS]

> Pali Lehohla Statistician-General Statistics South Africa [Stats SA]

Footnotes

Brazil

(1) For the surface of Brazil was maintained the value of $8,515,767.049 \text{ km}^2$, published in the DOU n° 118 of 06/22/2016, according to Resolution No. 02 of June 21, 2016.

(2) Information about the mid-year population and demographic indicators, were obtained by a projection of the population by sex and age groups by the component method for the Period 2000-2060.

India

(3) Projected population as on 1st March, 2016 based on Census 2001. The area used for working out population density by National Census Authority of India viz Registrar General of India is 3,166,414 sq kms (not 3,287,264 sq kms).

South Africa

- (4) Data pertains to 2016 mid-year population estimates.
- (5) Based on 2011 Census and 2016 mid-year population estimates.

Footnotes

Specific footnotes and sources of data may be seen from the respective chapters of the indicators. Some data are provisional (P) and budget estimates (BE).

Brazil

(1) Information about the mid-year population and demographic indicators were obtained by a projection of the population by sex and age groups by the component method for the Period 2000 - 2060.

(6) Revised data, according the last population estimate.

- (7) Population 15 years old and over.
- (11) Preliminary estimation and data is derived from quarterly GDP results.
- (18) Gini Index of Household Income.

Russia

(19) Calculations of Gini Index are based on macroeconomical per capita income data and information of sample household budget survey.

(27) Public paved roads.

(29) Proportion of internal research and development expenditure to GDP.

India

(2) The figure refers as on April 01, 2015.

(3) As on 1st March 2016, based on Census 2001 estimate.

(5) The Area used for working out population density by National Census Authority of India viz Registrar General of India is 3,166,414 sq kms (not 3,287,264 sq kms).

(8) The information is based on Sample Surveys conducted by National Sample Survey Office & pertains to the Survey Period July (Previous Year) to June (Year Indicated in the table). For example information for the year 2000 pertains to survey period July.

(12) The information is as per the financial year i.e. April of the year indicated in the table to March of the next year.

(15) Per capita GDP has been calculated on the basis of population as on 1^{st} October 2015, projected as per census 2011.

(20) The information is as per National Sample Survey.

(25) The information is as per agricultural year, i.e. July of the (indicated in the table) to June of the next year.

(26) As per final estimates.

(28) The information is as on 31st March of the year indicated in the table.

China

(4) Year-end population.

- (9) Share of number of employed persons to national population.
- (10) Registered Unemployment Rate in Urban Areas.

(13) GDP and Per Capita GDP in US dollars are converted using the annual average exchange rates.

- (14) Data of GDP are calculated at producers' prices.
- (16) Refers to government appropriation for education to GDP.
- (17) Refers to total expenditure on health as percentage of GDP.
- (21) Data of Gini Coefficient are based on per capita annual disposable income.
- (23) Refers only to Color TV.

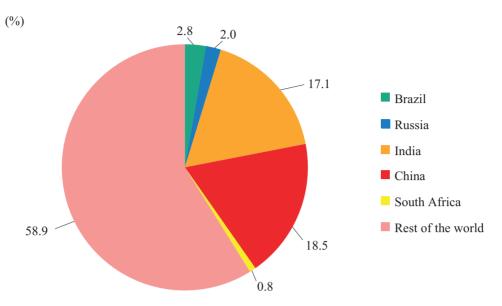

(24) Electric power in total primary energy production and total consumption of energy are converted on the basis of equal caloric value.

(30) Basic Passenger cars production.

South Africa

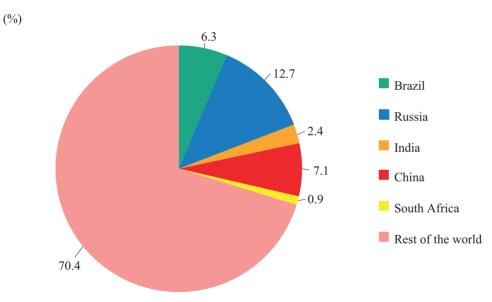

(22) Gini is per capita expenditure excluding taxes.

Footnotes

Brazil

(1) Data derived from Population Projection by Sex and Age for the Period 2000-2060.

(5) Urban percentage estimated by linear interpolation for the intercensal period 2000-2010 and designed by the methodology of the United Nations from 2010.

India

(2) The information is as on 1st March and is based on population projection. Explanatory notes may be seen for Census 2011 figures.

China

(3) Data in 2000 and 2010 are estimated from the fifth and sixth National Population Census respectively. Data in 2005 and 2015 are estimated from the National 1% Population Sample Survey. The other data are estimated from the annual national survey on population changes.

(4)Year-end population.

South Africa

(6)Population estimation series not active in 2000. Population figures can not be verified. Population estimation series does not split population into rural/urban.

- $(\ensuremath{\texttt{1}})$ Population estimation series not active in 2000. Population figures can not be verified.
- (2) Only registered marriages and divorces used in analysis (until 2012).
- (3) Data for civil unions starts from 2007.

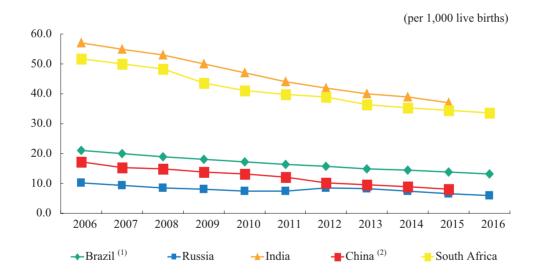

Graph 2.1 Natural Increase Rate of Population

(1) Data for India relates to year 2015.

Graph 2.2 Infant Mortality Rate

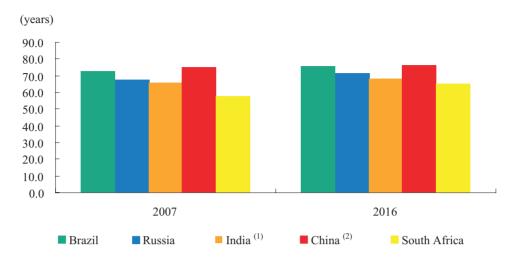

(1) Data on population and sex ratios were derived from Population Projection of Brazil by Sex and Age for the Period 2000-2060.

(2) Data refers to the surveillance areas.

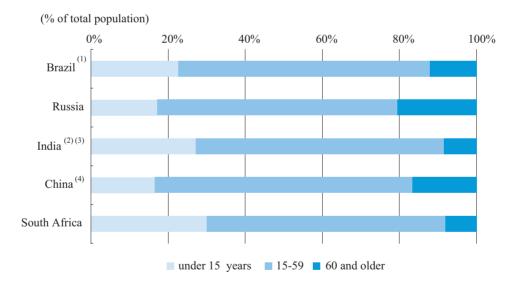

Graph 2.3 Life Expectancy at Birth

The correct data on life expectancy at birth for the mid year 2009 to 2013.
 Data is for 2013 instead of 2016.

(2) Data is for 2010 instead of 2007. Data is for 2015 instead of 2016.

Graph 2.4 Population by Age Groups, 2016 (% of total population)

- Data on population and sex ratios were derived from Population Projection of Brazil by Sex and Age for the Period 2000-2060.
- (2) The information pertaining to population is as on 1st March and is based on Population Projections for India and States Report 2001-2026 of RGI. This may vary with actual Census figure of 2011. Actual data for 2011 on the basis of Census 2011 has also been released by Ministry of Home Affairs, Office of the Registrar General of India.
- (3) Data for India relates to year 2015.
- (4) Estimated from the annual national sample survey on population changes.

Explanatory Notes:

General Notes

Total population (Mid-Year) Information about the population in half of the year, was obtained by a projection of the population by sex and age groups by the component method. This method consists of working separately each component of population dynamics of the population; fertility, mortality and migration.

Sex ratio expressed as the number of males for every 100 females. It is obtained from the ratio of the male and female populations by age group.

Total fertility rate The total fertility rate expresses the number of children who, on average, would a woman belonging to a hypothetical cohort of women during their fertility life (15 to 49 years) that had their children according to the fertility rates by age study period and were not exposed to the risk of mortality from birth to the end of the fertile period.

Infant mortality rate The infant mortality rate is defined as the number of deaths of infants under one year of age (per thousand live births) in a given geographical area and time period, and is interpreted as the estimated risk of a born live to die during their first year of life.

Crude birth rate Number of Births per 1000 population in a given year. This definition excludes fetal deaths.

Crude death rate Number of Deaths per 1000 population in a given year.

Natural increase rate of population The rate of natural increase is obtained by the difference between the crude birth rates and mortality.

Life expectancy at birth is the average number of years that a newborn would expect to live from the moment of birth.

Under-five mortality rate (according to WHO methodology) The probability of dying of a child born in a specific year before reaching the age of five, expressed per 1,000 live births.

Crude marriage rate The nuptiality rate is obtained by dividing the number of marriages of spouses 15 years of age or older by the population of this same age group multiplied by a thousand.

Crude divorce rate refers to ratio of divorce couples to the annual average population for the reference year, the formula is:

Crude divorce rate = Number of couples divorced for the reference year x 1,000‰ Annual Average population

Dependency rate number of people aged 0-15 and 60 and over to the population 15-59.

Census A canvass of a given area, resulting in an enumeration of the entire population and often the compilation of other demographic, social and economic information pertaining to that population at a specific time.

Russia

The information on births, deaths, marriages and divorces is received on the basis of annual processing of data contained in the records of Civil Registrar Offices.

India

Maternal mortality ratio (MMR) Refers to the number of women who die as a result of complications of pregnancy or childbearing in a given year per 100,000 live births in that year. This is different from Maternal Mortality Rate which is defined as the number of maternal deaths to women in the ages 15-49 per lakh of women in that age group.

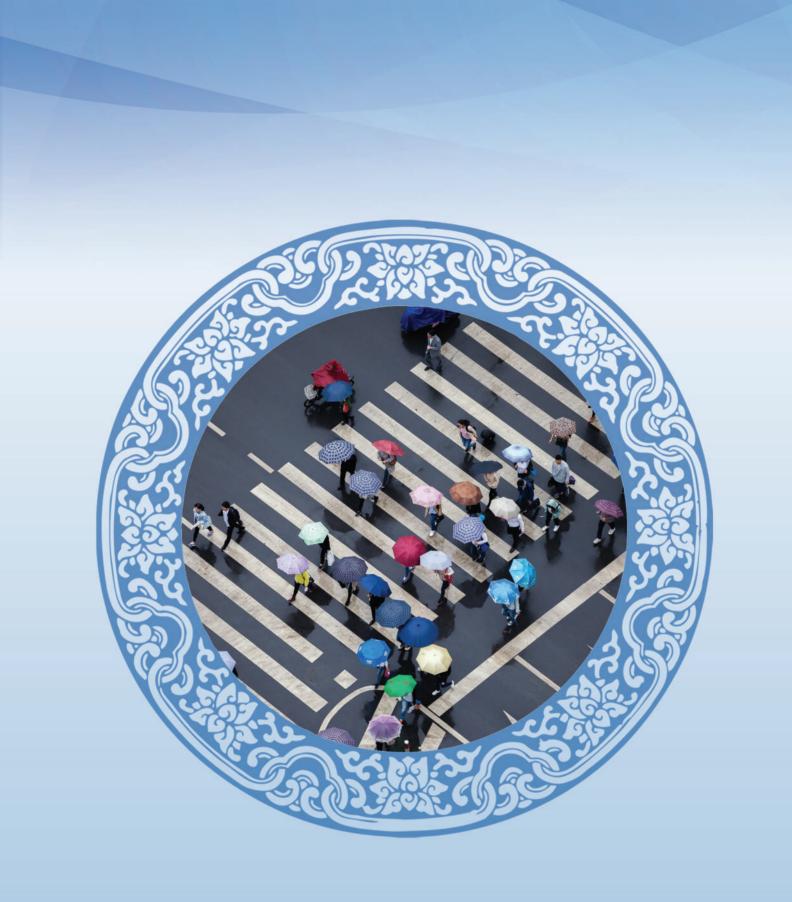

Census in India is conducted at interval of ten years and the last census was conducted in 2011. The population

projection for intercensal period and that for the future is based on Component Method using data from Census and Sample Registration System with the latter providing time series data on fertility and mortality. Accordingly, population from 2005-13 provided in the tables is based on projections using 2001 census information while that for 2000 is based on 1991 Census as per the Report of Technical Committees of 2006 and 1996 respectively.

Census 2011 figures are also available and as per the same, Population of India in 2011 was 1211 million. As per the Census 2011, the total population comprised of 378 Million Urban & 833 Million Rural Population and 625 Million Males & 586 Million Females.

Table 3.2.5 - Selected Data on Labour Force - South Africa

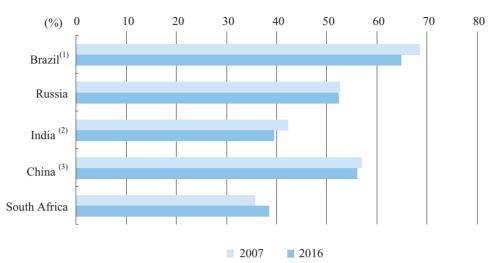

Source

Statistics South Africa, Labour Force Survey (Statistical Release PO210) and Quarterly Labour Force Survey (Statistical Release PO211).

Footnotes

- (1) 2000 data are for the September wave only (not annual figures) since the March wave was a pilot.
- (2) 2015 estimates are from the 2013 Master Sample.

(1)Data for 2015 instead of 2016.

(2) In case of India, data used pertains to year of 2006 and 2012 instead of 2007 and 2016 and the

value of "Share of Labour Force to national population" is 42.3% in 2006.

(3) Share of number of employed persons to national population.

Explanatory Notes:

General notes

Labour Force Persons who were either 'working' (or employed) or 'seeking or available for work' (or unemployed) constituted the labour force. This is for a particular reference period.

Unemployment Rate (UR) UR is defined as the number of persons unemployed per 1000 in the labour force(which includes both employed and unemployed)

Workers (or employed persons) Persons who were engaged in any economic activity or who, despite their attachment to economic activity, abstained from work for reasons of illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work, constituted workers. Unpaid helpers who assisted in the operation of an economic activity in the household farm or non farm activities were also considered as workers.

Activity status, Labour Force, Employment, Unemployment It is the activity situation in which a person was found during a reference period with regard to the person to the person's participation in economic and non-economic activities. According to this, a person could be in one or a combination of the following three broad activity statuses during reference period:

(i) Working or being engaged in economic activity .

- (ii) Being not engaged in economic activity (work) but either making tangible efforts to seek 'work' or being available for 'work' if 'work' is available and
- (iii) Being not engaged in any economic activity (work) and also not available for (work) Broad activity statuses mentioned in (i) and (ii) above are associated with 'being in labour force' and the last with 'not being in the labour force'. Within the labour force, broad activity status (i) and (ii) were associated with 'employed' and 'unemployed' respectively.

Brazil

Reference Week is the last complete week of September of each year.

Work

It was considered as work in the exercise of economic activity:

- a) Occupation paid in cash, products, goods or benefits (housing, food, clothes etc.) in the production of goods and services
- b) Occupation paid in cash or benefits (housing, food, clothes etc) in domestic services
- c) Occupation without pay in the production of goods and services, performed at least one hour per week: Helping a member of the household who had work as: employee in the production of primary goods (which includes the activities of agriculture, forestry, livestock, vegetable or mineral extraction, hunting, fishing and fish farming): or own account or employer in any activity;

Helping in a religious, charitable or cooperative institute or

As apprentice or trainee, or

d) Occupation developed for at least one hour per week:

- In the production of goods, of the branch that includes the activities of agriculture, forestry, livestock, vegetal extraction, fishing and fish farming, for own consumption or for the consumption of at least one member of household, or

- In construction of buildings, private roads, wells and other improvements (except only repairs work) for their own use or for the use of at least one member of the household.

Employed person who performed some work during all or part of the reference week. It is also included as employed persons who have not exercised their paid work during the reference week due to vacation, leave, strike etc.

Unemployed Person without work which had taken specific action to seek work (getting in touch with employers; enrolling or going in for official examination for a government job; registration at employment agency, union or similar body, placing or answering job advertisement; seeking assistance of relative, friend or colleague to find a job; taking an action to start a business; etc.) in the reference week.

Russia

Data on labour force are presented in accordance with the standards of the International Labour Organization. The number of labour force includes data on employed and unemployed based on the results of labour force surveys. The monitoring of labour force is carried out for persons of 15 - 72 years old.

India

The National Sample Survey Office, Ministry of Statistics & Programme Implementation carries out survey on the subject of employment and unemployment and labour force characteristics at the National and State levels.

The Survey is conducted Quinquennially along with some annual surveys in between. The Reference Period is usually July to June. However some surveys were conducted in six months. The Report includes status based on Usual Activity (Reference Period 365 days), Current Weekly Status (Reference Period 7 days)& Current Daily Status (Reference Period 1 day).

Usual principal activity status The usual activity status refers to the activity status of a person during the reference period of 365 days preceding the date of the survey. The activity status on which a person spent relatively longer time during the 365 days is considered as the usual principal activity status of the person.

Usual subsidiary economic activity status A person whose usual principal status was determined on the basis of the major time criterion could have pursued some economic activity for a shorter time throughout the reference year of 365 days preceding the date of survey or for a minor period, which is not less than 30 days,

during the reference year. The status in which such economic activity was pursued was the subsidiary economic activity status of that person.

Usual activity status considering principal and subsidiary status taken together The usual status, determined on the basis of the usual principal activity and usual subsidiary economic activity of a person taken together, is considered as the usual activity status of the person and is written as usual status (ps+ss). According to the usual status (ps+ss), workers are those who perform some work activity either in the principal status or in the subsidiary status. Thus, a person who is not a worker in the usual principal status is considered as worker according to the usual status (ps+ss), if the person pursues some subsidiary economic activity for 30 days or more during 365 days preceding the date of survey.

Unemployed: Persons, who owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration, were considered as those who were 'seeking or available for work' or unemployed.

Labour Bureau, Ministry of Labour , has also been conducting Annual Surveys on Employment & Unemployment in India since 2010-11.

China

Employed persons refer to persons above a specified age who had labour capacity and performed some social work for compensation or business gains. Specifically, it refers to all persons, aged 16 and over, who performed some work for compensation or business gains for one hour or more during the reference period; or who had work units or sites but were temporarily not at work during the reference period.

Registered unemployed persons in urban areas refer to the persons with non-agricultural household registration at certain working ages (16 years old to retirement age), who are capable of working, unemployed and willing to work, and have been registered at the local employment service agencies to apply for a job.

Registered unemployment rate in urban areas refers to the ratio of the number of the registered unemployed persons to the sum of the number of persons employed in various units (minus the employed rural labour force, re-employed retirees, and Hong Kong, Macao, Taiwan or foreign employees), laid-off staff and workers in urban units, owners of private enterprises in urban areas, owners of self-employed individuals in urban areas, employees of private enterprises in urban areas, employees of self-employed individuals in urban areas, and the registered unemployed persons in urban areas.

Footnotes

Brazil

(1) Data for 2015 and 2016 are derived from quarterly GDP results.

(2) Data of 2015 and 2016 are preliminary estimation.

Russia

(6) At constant prices.

India

Data for 2000 to 2010 relate to old base year (2004-05 prices) while that for 2011 and onwards relate to new base year (2011-12 prices).

(7) For the years up to 2010-11, the share in total GVA at factor cost and from the year 2011-12 onwards, share in total GVA at basic prices has been given.

China

(3) GDP and Per Capita GDP in US dollars are converted using the annual average exchange rates.

 $\left(4\right)$ Data of GDP are calculated at producers' prices.

(5) Preliminary data.

(8) In 2016, China move R&D from intermediate consumption to gross capital formation. This changes GDP by the same amount. Historical GDP data have since been revised.

Source

National Accounts Statistics, Back Series 2011, Press Note (First revised Estimate 2015-16), released on 31st Jan 2017 and Second Advance Estimates of 2016-17 released on 28th Feb. 2017.

Footnotes

(a) All Information pertains to Financial Year i.e. April of Year mentioned in the table above to March of next year.

(b) Data for 2000 to 2010 relates to old base year at 2004-05 prices while that for 2011 and onwards relates to new base year at 2011-12 prices.

- (c) Data for 2014 is revised estimate and Data for 2015 is provisional estimate.
- (d) One Crore is equal to ten millions.

(1) Base year for data for 2000 and 2006 to 2010 is 2004-05 and base year for data for 2011 to 2016 is 2011-12.

(2) Figures for the years 2006 to 2010 are based on 2004-05 as base year and those for years 2012 onwards are based on 2011-12 as base year.

- (3) Includes private and government final consumption expenditure.
- (4) Includes valuables.
- (5) Does not include valuables.
- (6) Population as on 1st October of the year indicated in the table.

(7) Foreign Exchange Rates have been taken from Reserve Bank of India (RBI) website.

Footnotes

- (1) Preliminary data.
- (2) GNI in US dollars are converted using the annual average exchange rates.

(3) The components of GDP by production approach are calculated at producers' prices.

(4) After 2014, China economic activities are categorized into three strata of industries according to the "Three Strata of Industries Classification Regulations" enacted by NBS in 2012, and historical data are revised accordingly. Three strata of industry in China economic activities are categorized into the following three strata of industry: Primary industry refers to agriculture, forestry, animal husbandry and fishery industries (except support service activities to agriculture, forestry, animal husbandry and fishery industries). Secondary industry refers to mining and quarrying (except auxiliary activities of mining and quarrying), manufacturing (except repairs for metal products, machinery and equipment), production and supply of electricity, steam, gas and water, and construction. Tertiary industry refers to all other economic activities not included in the primary or secondary industries.

(5) In 2016, China move R&D from intermediate consumption to gross capital formation. This changes GDP by the same amount. Historical GDP data have since been revised.

Explanatory Notes:

General notes

National product by definition is a measure in monetary terms of the volume of all goods and services produced by an economy during a given period of time, accounted without duplication. The measure obviously has to be in value terms as the different units of production and different measures of services are not directly added. In the case of a closed economy, the measure amounts to domestic product (Gross Domestic Product).

Gross national income (GNI)

GNI = GDP + compensation of employees and property income receivable from the rest of the world – compensation of employees and property income payable to the rest of the world.

Government final consumption expenditure comprises the compensation of employees and purchases of goods and services by the government including purchases abroad. Compensation of employees of general government consists of wages and salaries and social security contribution.

Brazil

The Brazilian System of National Accounts reference 2010, as established by international recommendations, is in accordance with the new manual of the System of National Accounts 2008, SNA 2008.

Expenditure measure of GDP The expenditure measure of gross domestic product (GDP) is derived as the sum of expenditure on final consumption plus gross capital formation plus exports less imports.

Gross fixed capital formation in a particular category of fixed asset consists of the value of producers' acquisitions of new and existing products of this type less the value of their disposals of fixed assets of the same type.

Gross fixed capital formation is measured by the total value of a producer's acquisitions, less disposals, of fixed assets during the accounting period plus certain specified expenditure on services that adds to the value of non-produced assets.

Gross capital formation shows the acquisition less disposal of produced assets for purposes of fixed capital formation, inventories or valuables.

Expenditures on goods and services are defined as the values of the amounts that buyers pay, or agree to pay, to sellers in exchange for goods or services that sellers provide to them or to other institutional units designated by the buyers.

Goods and services account The goods and services account shows the balance between the total goods and services supplied as resources to the economy as output and imports (including the value of taxes less subsidies on products not already included in the valuation of output) and the use of the same goods and services as intermediate consumption, final consumption, capital formation and exports.

Final consumption expenditure is the amount of expenditure on consumption goods and services.

Household final consumption expenditure consists of the expenditure, including expenditure whose value must be estimated indirectly, incurred by resident households on individual consumption goods and services, including those sold at prices that are not economically significant and including consumption goods and services acquired abroad.

General government final consumption expenditure consists of expenditure, including expenditure whose value must be estimated indirectly, incurred by general government on both individual consumption goods and services and collective consumption services.

Final consumption expenditure of NPISHs consists of the expenditure, including expenditure whose value must be estimated indirectly, incurred by resident NPISHs on individual consumption goods and services and possibly

on collective consumption services.

Inventories are produced assets that consist of goods and services, which came into existence in the current period or in an earlier period, and that are held for sale, use in production or other use at a later date.

Primary Industry: Agriculture, forestry, animal husbandry and fishery.

Secondary Industry: Mining, manufacturing, electricity, gas and water and construction.

Tertiary Industry: The other industries of national economy.

Russia

Primary industry: Agriculture, forestry, animal husbandry and fishery.

Secondary industry: Mining, manufacturing, electricity, gas and water and construction.

Tertiary industry: The other industries of national economy.

Gross Domestic Product (GDP) at market prices is the final result of the production activity of all producer units within a country area. It may be estimated using three methods: production, use of incomes (or expenditure method) and GDP formation by income sources. GDP, measured by production method, is defined as a difference between total output of goods and services for the whole economy, on the one hand, and intermediate consumption, on the other, or otherwise as a sum of value added in the sectors of the economy. GDP, measured by the method of use of incomes, represents a sum of expenditures of all the institutional units – residents for final consumption, gross capital formation and net exports. GDP calculated on the basis of income sources reflects primary incomes accumulated in the process of production by all institutional units grouped by sectors of the economy.

Final consumption expenditures comprise final consumption expenditures of households, final consumption expenditures of public administration on individual goods and services and collective services, final consumption expenditures of non-profit institutions serving of households.

Gross capital formation indicates net acquisition by resident units of goods and services produced in the current period or imported, but not consumed in that period. Gross capital formation includes gross fixed capital formation, changes in inventories, as well as net acquisition of valuables.

Net exports of goods and services are calculated as a difference between exports and imports and include trade turnover of Russia with foreign countries.

India

Central Statistics Office (CSO) in the Ministry of Statistics & PI compiles estimates of national accounts aggregates and publishes them in its annual publication called National Accounts Statistics. The estimates are based on performance during the Financial year (April- March (next year)). CSO brings out First Revised Estimates in January for the preceding year along with revision of estimates for a few earlier financial years using detailed and more comprehensive data.CSO also compiles advance estimates for the current financial year and releases it two months before the close of the year. Various aggregates brought out by CSO include GDP, NDP, GNI, and NNI, product and production taxes and subsidies, consumption of fixed capital, net national disposable Income, personal disposable income, private final consumption expenditure (PFCE), government final consumption expenditure (GFCE), exports and imports, gross & net capital formation, savings, etc.

The economy of India is not closed as there are transactions with rest of the world in the form of exports, imports, loans etc. This gives rise to the concept of national or domestic.

Gross domestic product refers to production of all resident units within the borders of a country, which is not exactly same as the production of all productive activities of residents. Some of the productive activities of residents may take place abroad. Conversely, some production taking place within a country may be attributed to temporary and seasonal foreign labour.

4

GNI = GDP + compensation of employees and property income receivable from the rest of the world – compensation of employees and property income payable to the rest of the world

Final consumption expenditure includes both private final consumption expenditure & government final consumption expenditure.

Private final consumption expenditure The household consumption expenditure referred to as private final consumption expenditure (PFCE) in National Accounts Statistics (NAS), consists of expenditure by households and non-profit institutions serving households on durable, semi-durable and non-durable consumer goods and services.

Government final consumption expenditure Government final consumption expenditure comprises the compensation of employees paid and purchases of goods and services by the government used for production of non-market services. Compensation of employees of general government consists of wages and salaries.

Final consumption rate is total final consumption expenditure expressed as percent of gross domestic product at market prices (current prices).

Gross capital formation rate is total gross capital formation expressed as percent of gross domestic product at market prices (current prices).

Following categorization has been used for industry wise estimates in case of India :

Primary sector of industries includes agriculture, forestry & fishing and mining & quarrying.

Secondary sector of industries includes manufacturing, electricity gas & water supply and construction.

Tertiary sector of industries includes other industries of national economy.

China

Gross Domestic Product (GDP) refers to the final products at market prices produced by all resident units in a country (or a region) during a certain period of time. In the practice of national accounting, GDP is calculated from three approaches, namely production approach, income approach and expenditure approach, which reflect GDP and its composition from different angles.

Per Capita GDP = GDP / annual average population.

Three strata of industry in China economic activities are categorized into the following three strata of industry: Primary industry refers to agriculture, forestry, animal husbandry and fishery industries (except support service activities to agriculture, forestry, animal husbandry and fishery industries). Secondary industry refers to mining and quarrying (except auxiliary activities of mining and quarrying), manufacturing (except repairs for metal products, machinery and equipment), production and supply of electricity, steam, gas and water, and construction. Tertiary industry refers to all other economic activities not included in the primary or secondary industries.

Indices of GDP measure the change of GDP at constant prices. GDP at constant prices converts GDP based on the current price into a value based on the price of the base period. When adjusted for price changes, the values of two different periods can be compared to reflect changes of both products and production activities.

GDP by expenditure approach refers to the method of measuring the final results of production activities of a country (region) during a given period from the perspective of final uses. It includes final consumption expenditure, gross capital formation and net export of goods and services. The formula for computation is: GDP by expenditure approach = final consumption expenditure + gross capital formation + net export of goods and services.

Final consumption expenditure refers to the total expenditure of resident units for purchases of goods and services from both the domestic economic territory and abroad to meet the needs of material, cultural and spiritual life. It does not include the expenditure of non-resident units on consumption in the economic territory

of the country. The final consumption expenditure is broken down into household consumption expenditure and government consumption expenditure.

Gross fixed capital formation refers to the value of acquisitions less those disposals of fixed assets during a given period. Fixed assets are the assets produced through production activities with unit value above a specified amount and which could be used for over one year. Natural assets are not included.

Gross fixed capital formation can be categorized into total tangible fixed capital formation and total intangible fixed capital formation. Total tangible fixed capital formation includes the value of the construction projects and installation projects completed and the equipment, apparatus and instruments purchased (less those disposed) as well as the value of land improved, the value of draught animals, breeding stock and animals for milk, for wool and for recreational purposes and the newly increased forest with economic value. Total intangible fixed capital formation includes the prospecting of minerals and the acquisition of computer software minus the disposal of them.

Changes in inventories refer to the market value of the change in the physical volume of inventory of resident units during a given period, i.e. the difference between the values at the beginning and at the end of the period minus the gains due to the change in prices. The changes in inventories can have a positive or a negative value. A positive value indicates an increase in inventory while a negative value indicates a decrease in inventory. The inventory includes raw materials, fuels and reserve materials purchased by the production units as well as the inventory of finished products, semi-finished products and work-in-progress.

Net export of goods and services refers to the exports of goods and services subtracting the imports of goods and services. Exports include the value of various goods and services sold or gratuitously transferred by resident units to non-resident units. Imports include the value of various goods and services purchased or gratuitously acquired resident units from non-resident units. Because the provision of services and the use of them happen simultaneously, the acquisition of services by resident units from abroad is usually treated as import while the acquisition of services by non-resident units in this country is usually treated as export. The exports and imports of goods are calculated at FOB.

Final consumption rate refers to final consumption expenditures as percentage of gross domestic product by expenditure approach.

Gross capital formation rate refers to gross capital formation as percentage of gross domestic product by expenditure approach.

South Africa

Base year 2010=100.

Primary industries = Agriculture, Forestry and fishing and Mining and quarrying.

Secondary industries = Manufacturing; Electricity, gas and water and Construction.

Tertiary industries = Wholesale, retail and motor trade, catering and accommodation; Transport, storage and communication; Finance, real estate and business services; General government and Personal services.

Footnotes

(1) Data on components of CPI of 2000 are not available since the classification of CPI was revised in 2001. Due to the revision of the components of CPI in 2016, some of the names and contents of the CPI classification has been changed and the related data is incomparable with the historical data.

(2) Producer price indices of industrial products refer to the prices of industrial products when they leave factories.

(3) Price indices for agricultural products refer to that for food processing industry of agricultural products.

(4) Price indices for raw materials refer to the purchasing price indices for raw materials, fuels, and power.

Statistics South Africa.

Footnotes

(a) CPI - Consumer price indices.

(b) PPI - Producer price indices.

(c) Break in series, all indices prior to 2008 not official indices. Linking factors used to calculate continuous time series. Linking factors: Consumer Price Indices (all items, preceding year=100); Consumer Price Indices Grouped by Urban Area; Consumer Price Indices Grouped by Rural Area; Housing Indices; Food Indices; Electricity; Clothing Indices; Rent Indices.

(1) December 2012 = 100.

(2) All items headline measure from 2000 to 2008 based on primary areas, currently based on primary and secondary areas.

(3) Includes all housing, i.e. rental, owners equivalent rent, utilities and maintenance. Electricity excluded (2000-

2007). Change in method of calculation in owner-occupied housing from 2008.

(4) Food only (does not include non-alcoholic beverages).

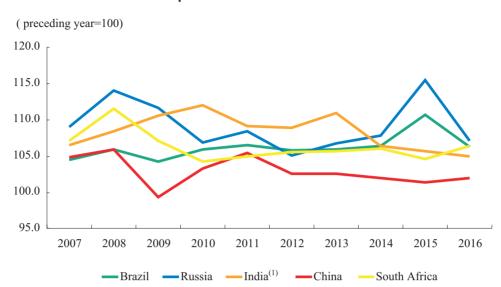

(5) Includes electricity and other solid and liquid fuels.

(6) Year 2000 = 100.

(7) Discontinued in December 2012.

(8) Introduced in January 2013, history starts from January 2012. Base year 2012=100.

Graph 5.1 Consumer Price Index

(1) The Consumer price index of India pertains to industrial workers only.

Explanatory Notes:

General notes

The retail price is defined as money cost to the consumer of a specified unit of sale which is inclusive of all rebates and discounts etc.

Consumer price index (CPI): It indicates time fluctuations of retail prices of goods and services purchased by the consumers for non production consumption within a specified period of time. It is a ratio of value of a fixed basket of main goods and services at the prices of the current period as related to its value at the prices of the base period. CPI is calculated monthly on the basis of statistical data collected while observing price changes in retail trade and service establishments and also in commodity, mixed and food market and as well as on data of actual structure of consumer expenditures of households for the previous year.

Producer price index (PPI): It measures the average changes in producers' prices over a period of time. It represents bulk transaction generally at the early stage of trading. The price pertaining to bulk transactions may have divergent nomenclatures e.g. farm harvest prices, wholesale prices, procurement prices, support prices, administered prices, import prices, forward prices etc. Wholesale price index relates to the transactions at the primary stage which broadly correspond to producer prices.

Brazil

The Brazilian Institute of Geography and Statistics (IBGE) is the government organisation responsible for the computation of the Extended National Consumer Price Index (IPCA), which is the official and main inflation indicator of the country. IPCA is used by the Central Bank to monitor objectives set in the inflation targets system. The index is computed on a monthly basis and refers to families inhabiting in urban localities, with monthly income, from any source, ranging from 1 (one) to 40 (forty) minimum wages. The geographical coverage of the index encompasses 10 metropolitan regions, Goiânia and Campo Grande cities, and also Brasília (Brazil's capital). The indicator ensures a coverage of approximately 90% of urban areas in the geographical scope of the

research.

The index tracks the movement of prices of a fixed basket of goods and services consumed by households, conceived from the Consumer Expenditure Survey (Pesquisa de Orçamentos Familiares - POF), which depicts the consumption habits of Brazilian families. The weights applied to the calculation of the current consumer price indices of IBGE are based on the Consumer Expenditure Survey (POF) conducted in 2008/2009.

Apparel includes clothing (female, male and child); footwear and accessories; jewels and trinkets; fabrics and haberdashery.

Russia

Consumer price indices (CPI) indicates time fluctuations of prices on goods and services purchased by the consumers for nonproduction consumption within a specified period of time. It measures a ratio of value of a fixed basket of main goods and services at the prices of the current period as related to its value at the prices of the base period. CPI is calculated monthly on the basis of statistical data collected while observing price changes in retail trade, service and catering establishments and markets and as well as on data of actual structure of consumer expenditures of households for 2 previous years.

CPI is computed for the urban population and it is diffused for the whole population.

Producer price indices (PPI) for industrial goods are complied on the basis of recording prices for representative goods (services) produced by 10 thousand basic (key) organisations covered by the survey. Average prices and price indices are calculated for more than 1100 representative goods (services). Producer prices are actual prices for produced and shipped goods (services rendered) provided for selling on the domestic market (except indirect taxes). PPI calculated for representative goods (services) shall be gradually aggregated into indices of corresponding types, kinds, classes, divisions of economics activities. Data on the volume of production and shipment in value terms of the base period are being used as the weight factors.

India

Consumer price index number for Industrial workers measures a change over time in prices of fixed basket of goods and services consumed by Industrial Workers. This index number is utilized for regulation of wages and dearness allowances of millions of employees and workers in the organised sector. It also serves as an indicator of retail prices in the country and is used for formulation of wages and interest policies The Labour Bureau, an attached office of the M/o Labour& Employment, has been compiling and disseminating Consumer Price Index for industrial worker since its inception in the year 1946.

This index series till 2005 was based on 1982=100. A new series on base: 2001=100 has been released w.e.f. January, 2006. The data on Consumer Expenditure have been obtained from an ad-hoc survey "Family Income and Expenditure Survey" conducted during September 1999 to August 2000 in respect of 78 selected centers by the NSSO on behalf of Labour Bureau. These 78 centres were selected on the basis of their industrial importance in the country and distributed among different States in proportion to the Industrial employment in the State subject to a maximum allotment of 5 centers per State per sector. On the basis of the results thrown up by the survey, the weighing diagrams have been derived in respect of each of 78 constituent centres and at All India level also. The indices are compiled by using price data collected on monthly basis and house rent survey data on half yearly basis. The CPI (IW), centrewise and at all India levels is released monthly with time lag of one month (on the last working day of the following month).

Index number of wholesale prices in India is compiled by Office of Economic Adviser, Ministry of Commerce & Industry. The present series has 2004-05 as the base year and the data is released monthly. It is the most commonly used as measure of Inflation in India. Item Basket and the weighting digram is based on Gross Value of Output as obtained from National Accounts Statistics, 2007. Seasonal Items have also been included and

when they disappear, their weight is distributed over remaining items in the sub group on a pro rata basis. Unlike 1993-94 series, in the new series, instead of Public Distribution System prices of Paddy and wheat, their procurement prices have been included to correctly represent the first point of sale.

The existing series is based on ex-factory/ex-mine prices in respect of the manufactured items. In the case of Agricultural commodities, however, the prices as quoted in primary wholesale markets are used. The collection of price data is through correspondence & self filing of information. Varous units submit the prices electronically through online forms.

Index is compiled on the principle of weighted arithmetic mean according to the Laspeyre's formula, which has fixed base year weights operating through the entire life span of the series.

China

Consumer price indices reflect the trend and degree of changes in prices of consumer goods and services purchased by urban and rural households during a given period. They are obtained by combining consumer price indices of urban household and consumer price indices of rural household. The indices enable the observation and analysis of the degree of impact of the changes in the prices of retail goods and services on the actual living expenses of urban and rural residents.

Producer price indices for Industrial Products reflect the trend and degree of changes in general exfactory prices of all industrial goods during a given period, including sales of industrial goods by an industrial enterprise to all units outside the enterprise, as well as sales of consumer goods to residents. It can be used to analyze the impact of ex-factory prices on gross output value and value-added of the industrial sector.

South Africa

Break in series, all indices prior to 2008 not official indices. Linking factors used to calculate continuous time series. Linking factors: All items; Urban Area; Rural Area; Housing Indices; Food Indices; Electricity; Clothing Indices; Rent Indices.

Footnotes

Brazil

(5) The data for Brazil refer to vehicles per 100 persons.

(6) Estimated data.

(12) Revised data, according to the last population estimate.

(13) Employed population 15 years and older with work income.

(15) 1- The following groups of nature of expenditure were considered: active personnel and social costs; other current expenditures; investments and financial inversions; 2 - This information does not include the following expenses: retirement and reform pensions scholarship resources and financing student, expenses with interest and debt burdens, educational burdens amortizations, current and capital transfers to the private sector.

(26) Gini index of household income.

(33) The expenditure on R&D activities on the surveyed units typically results from their own production, with estimatives based on the sum of cost approach (intermediate consumption, employees `compensation, consumption of fixed capital). The total expenditure on R&D activities is complemented with thoses units that produce for the market. The units can be public or private for own production, while R&D market producers are all private.

Russia

(1) All type TV sets. Per 100 households. By data of sample household budget survey.

(7) Personal passenger cars.

(16) Estimates on the base of the data of the Federal Treasury. Since 2005 including budgets of the state nonbudget funds.

(17) School Life Expectancy (Data from UNESCO Institute for Statistics (UIS) database).

(27) Calculations of Gini Index are based on macroeconomical per capita income data and information of sample household budget survey. Data for 2016 year are preliminary.

(31) Proportion of internal research and development expenditure to GDP.

(34) Before 2011 year data include expenditure on physical culture and sport.

India

(2) Figures are estimates indicating number of households having TV per 100 households as on 31st March of the year indicated in the table. The percentage of households having TV sets as per census 2001 was 31.6%.

(8) Figures have been derived by dividing No. of registered vehicles as on 31^{st} March of the year indicated in the table (except for 2000 where the data is as on 31^{st} March 2001) by mid year population.

(9) Provisional.

(18) Information pertains to Financial Year (i.e. April of Year indicated in the table to March next year) and it relates to Expenditure of general government (i.e. Central Government & State Governments Combined).

(19) Revised Estimates.The given figures after year 2012 have been updated using the following data sources according to years: (1) For the year 2013 - the numerator and denominator are sourced from National Health Accounts estimates for India 2013-14 report (2) For the year 2014 - the numerator and denominator are sourced from National Health Accounts estimates for India 2013-14 report (2) For the year 2014 - the numerator and denominator are sourced from National Health Accounts estimates for India 2014-15 (draft estimates) (3) For 2015 and 2016

the numerators (revised estimates 2015-16 and budget estimate 2016-17) are sourced from "health sector financing by centre and states/ UTs in India [2014-15 to 2016-17]", compiled by NHA Cell, MoHFW, Gol; and denominators (GDP for 2015 and 2016 repectively) are sourced from Statement 2, page no.9 of "Press Note on Second Advance Estimates of National Income 2016-17 and Quarterly Estimates of Gross Domestic Product for the Third Quarter (Q3) of 2016-17".

(20) Budget Estimates. The given figures after year 2012 have been updated using the following data sources according to years: (1) For the year 2013 - the numerator and denominator are sourced from *National Health Accounts estimates for India 2013-14 report* (2) For the year 2014 - the numerator and denominator are sourced from *National Health Accounts Estimates for India 2013-14 report* (2) For the year 2014 - the numerator and denominator are sourced from *National Health Accounts Estimates for India 2014-15* (draft estimates) (3) For 2015 and 2016 the numerators (revised estimates 2015-16 and budget estimate 2016-17) are sourced from *Health Sector Financing by Centre and States/ UTs in India [2014-15 to 2016-17]*, compiled by NHA Cell, MoHFW, Gol; and denominators (GDP for 2015 and 2016 repectively) are sourced from Statement 2, page no.9 of *Press Note on Second Advance Estimates of National Income 2016-17* and *Quarterly Estimates of Gross Domestic Product for the Third Quarter (Q3) of 2016-17*.

(28) Gini coefficient of household consumption has been calculated on the basis of National Sample Survey Periods (i.e. July 1999-June 2000, July 2004-June 2005 & July 2009-June 2010 to July 2011-June 2012) and is based on mixed recall period.

(32) As on April 01, 2015.

China

(3) In the fourth quarter of 2012, the National Bureau of Statistics of the People's Republic of China conducted the integrated survey of urban and rural households, unifying the names, classification and statistical standards of urban and rural households. On its basis, we got the ownership data of resident in China, including the number of colour TV sets, cars and personal computers etc.

(10) In rural household survey of China, cars refer to the automobiles for living use, including vans.

(14) Average annual wage of staff and workers refers to the average wage level in monetary terms per staff and worker during a year of time.

(21) Government appropriation for education to GDP.

(23) Average years of education attained by the population above 15 years of age.

(24) Total expenditure on health as percentage of GDP.

(29) Data of Gini coefficient are based on per capita annual disposable income.

South Africa

(4) Information based on data from the General Household Survey (GHS) in which household were asked to indicate whether the household contained at least one television set. Not asked whether it was colour. Calculation: Total number of sets/total population x k.

(11) Data GHS in which household were asked to indicated whether the household contained at least one vehicle in working condition.Calculation: Total number of households with a working vehicle/total population x k.

(22) General government expenditure on education as a percentage of GDP.

(25) General government expenditure on health as a percentage of GDP.

(30) Gini is per capita expenditure excluding taxes.

Footnotes

(1) Pertains to National Sample Survey Rounds (i.e Period July of the previous year to June of the year mentioned in the table). The information on quintile groups and nutritional intakes pertains to uniform reference period where as that for poverty lines pertains to mixed recall period as per Tendulkar Methodology.

(2) Information pertains to financial year (i.e. April of year indicated in the table to March next year). Expenditure on health & educatiuon relates to Expenditure of general government (i.e. Central government & State governments combined). Assuming this indicator to be Government health expenditure as a percentage of General Government Expenditure (GGE); the given figures have been updated. The data sources used for different years are as follows: (1) for year 2013 - the numerator and denominator are sourced from *National Health Accounts estimates for India 2013-14 report.* (2) for year 2014 - the numerator and denominator are sourced from *National Health Accounts estimates for India 2013-14 report.* (2) for year 2014 - the numerator and denominator are sourced from *National Health Accounts estimates for India 2013-14 report.* (2) for year 2016-17) are sourced from *Health Sector Financing by Centre and States/ UTs in India [2014-15 to 2016-17]*, compiled by NHA Cell, MoHFW, Gol; and denominators (GGE for 2015 and 2016 repectively) are calculated by adding Revenue expenditure and capital out lay of all states is sourced from the *State Finances: A study of Budgets* an annual publication of Reserve Bank of India. The capital and revenue expenditure of the Union Government is sourced from *Union Budget 2017-18 - Budget at a Glance, Expenditure* (statement).

(3) As on end of December of the year indicated in the table . The data relates to number of doctors and include government allopathic doctors and dental surgeons & average population served in India (provisional) and number of beds in government hospitals including community health centers.

(4) Includes deaths due to traffic accidents, air crash, fire, poisoning, electrocution etc.

(5) Information under the column for year 2000 and 2011 is based on Census 2001 and 2011 and is as on 31^{st} March 2001 and 31^{st} March 2011 respectively.

(6) Pertains to survey period July - December 2012. Figures under tap water for the year 2012 includes piped water / public taps but excludes bottled water.

(7) Information on expenditure pertains to mixed reference period.

(8) Illiteracy rate pertains to age 7 years and above. Illetracy rate as per census 2011 is 15.9% in case of urban areas and 32.2% in case of rural areas.

(9) Revised estimates.

(10) Budget estimates.

(11) Provisional.

(12) As on April 01, 2015.

(13) Information provided in above table is for each period starting from 1^{st} April of previous year to 31^{st} March next year, i.e. Financial year period. The above information is also with respect to the applications filed by Indians in India wherein India is Receiving Office (RO) only.

Explanatory Notes:

Population below international poverty line (1.25\$ a day PPP) as % of total population - percentage of the population living on less than 1.25\$ a day at 2005 international prices (according to Purchasing Power Parity exchange rates).

Percentage share of income or consumption by 20% subgroups of population - share that accrues to 20% subgroupes (quintiles) of population.

Income quintile ratio - ratio of the average income (or consumption) of the highest (richest) 20% of population to the average income (or consumption) of the lowest (poorest) 20% of population.

Proportion of population 25 years and over with completed tertiary education - percentage share of the population aged 25 years and over with completed tertiary education (according to ISCED 5 or 6) to the total population.

Brazil

Household's per capita disposible income (R\$) - household's gross disposable income divided by the estimeted resident population on 1st July of the respective year.

Household's per capita savings balance (R\$) - household's gross savings divided by the estimeted resident population on 1st July of the respective year.

Wage - it was considered the monthly wage usually received in the reference month (September of each year).

a) **Employees:** the wage was the gross monthly income that would normally be entitled to the whole working month and, when the income was variable, it was the average monthly income for the month of reference of the survey year. It were not included 13th salary (14th salary and 15th salary etc.) and profit-sharing paid by the enterprise to their employees. Also the amount received in benefits (housing, food, clothing, transport, meal or food stamps etc.) was not included in the calculation of the income of the employees.

b) Employers and own account: the income was the withdrawal usually made monthly or, when the gains was variable, the average monthly withdrawal for the month of reference of the survey year .The withdrawal was the gain (gross income less expense incurred with the enterprise, such as paying employees, raw material, electricity, telephones etc.). It was not included the value of the production of the enterprise used for own consumption.

Research and development expenditure (% of GDP) - The expenditure on R&D activities on the surveyed units typically results from their own production, with estimatives based on the sum of cost approach (intermediate consumption, employees compensation, consumption of fixed capital). The total expenditure on R&D activities is complemented with thoses units that produce for the market. The units can be public or private for own production, while R&D market producers are all private.

Average years of schooling (year) refers to the average of total years of academic education by adults aged 15 years and above (including general education and adult academic education, excluding various non-academic education).

Explanatory note: this indicator is one of the most important indicators to reflect the educational attainment or national quality in a country or a region.Formula: Mean years of schooling (of adults) = (sum of years of academic educational years by adults aged 15 years and above/population aged 15 years and above) x 100%, of which, the criteria of various educational levels converted into years of shooling is: never go to school = 0 year; primary school = 6 years; junior middle school = 9 years; senior middle school = 12 years; tertiary education = 16 years.

Russia

Growth rate (Index) of real wages - relative indicator which is calculated by dividing the indices of accrued wage by consumer price indices for respective period of time. Average nominal accrued wage are compiled by

6

dividing accrued wages fund of employees by average annual payroll number of employees. The accrued wages fund of employees includes sums of payments added to employed in the monetary and not monetary forms for fulfilled and unfinished time, the compensatory payments connected with working conditions, surcharges and extra charges, bonuses, occasional incentive payments and also payments of meal and residing, having regular character. Benefits granted to the employees from the state social extra-budget funds are not included in the wages fund.

Number of physicians include all doctors with the higher medical education engaged in the treatment and sanitary organizations, social security establishments, research institutes, personnel training establishments, in public health management bodies and others.

Hospital beds are the beds equipped with the required appliances and ready to receive patients.

Area of parks and green land includes area of the common using green plantations (parks, gardens, squares and parkways), forest parks and city gardens, area of gardening of local roads.

Gini Index characterizes the level of deviation of the actual distribution of the income of population from the line of the even distribution.

School life expectancy (according to the UNESCO methodology) - number of years a person of school entrance age can expect to spen within the specified level of education .

Population below international poverty line (1.25\$ a day PPP) as % of total population - percentage of the population living on less than 1.25\$ a day at 2008 international prices (according to Purchasing Power Parity exchange rates).

India

Gini coefficient: Gini Coefficient in case of India is calculated by NITI Aayog of India on the basis of Consumer Expenditure data (expenditure is used as proxy for income to meausre inequality) compiled by National Sample Survey Office. The Gini Coefficient is produced both for uniform reference period and mixed reference period. The information included is based on mixed reference period i.e. different recall periods for different items.

Tertiary education: According to Indian Standard Classification of Education (InSCED) 2014, Ministry of Human Resource Development, Department of Higher Education, Government of India, definition of Tertiary Education is as follows:

Tertiary education builds on senior secondary education, providing learning activities in specialised fields of education. It aims at learning at a high level of complexity and specialisation. Tertiary education includes what is commonly understood as academic education but also includes advanced vocational or professional education.

In NSS surveys on Employment and Unemployment and on Education, "tertiary education" is not defined. However, for the purpose of this document, those with general educational level "graduate and above" has been considered as having completed "tertiary education".

China

Government appropriation for education refers to state budgetary fund for education, taxes and fees collected by governments at all levels that are used for education purpose, education fund for enterprise-run schools, income from school-run enterprises, work-study programme and social services that are used for education purpose.

Percentage of urban population with access to gas refers to the ratio of the urban population with access to gas to the total urban population at the end of the reference period.

Urban green areas per capita refers to the ratio of the urban green areas to the total urban population. Area of Urban Green Areas refers to the total area occupied for green projects at the end of the reference period, including park green land, protection green land, green land attached to institutions and other green land.

Regular institutions of higher education refer to educational establishments set up according to the government evaluation and approval procedures, recruiting graduates from senior secondary schools as the main target by National Matriculation TEST. They include full-time universities, colleges, institutions of higher professional education, institutions of higher vocational education, institutions of higher vocational education and others (non-university tertiary, branch schools and undergraduate classes), including total enrollment in full undergraduate courses and in specialized courses.

Regular secondary schools are classified into regular senior secondary schools and junior secondary schools, including: Regular Senior Secondary School referring to education establishment providing senior secondary education service to graduates of junior secondary school; Regular Junior Secondary School referring to education establishment providing fundamental secondary education service to graduates of primary school.

Vocational secondary schools include vocational junior secondary school and vocational senior secondary school, referring to education establishment ratified by education authority at county level or above to enroll graduates of primary school and junior secondary school and provide junior or senior vocational education service.

Regular primary schools refer to education establishments ratified by education authority at county level or above to children of school age and provide primary education service.

Special schools refer to regular or vocational primary or secondary education institutions enrolling children with physical or intellectual disabilities and other special children and teenagers that have demand for special education.

Pre-primary education institutions include kindergarten and preschool class. Kindergarten enrolls three-yearold (and above) preschool children and provides care and education service. Establishment of kindergarten shall be approved by education authority at county level or above or town government, and shall be registered in file. In those regions without the resources of providing three year preschool education to preschool children, oneyear preschool class can be set up to provide one-year preschool education service to preschool children.

Physicians refer to licensed (assistant) doctors. Licensed assistant doctors refer to the medical workers who have obtained the licenses of qualified (assistant) doctors and are employed in medical treatment, disease prevention or healthcare institutions, excluding the licensed (assistant) doctors engaged in management job. The classification of licensed (assistant) doctors is clinician, Chinese medicine, dentist and public health.

Number of licensed (assistant) doctors per 1,000 population The formula is: Number of Licensed (Assistant) Doctors per 1,000 Population = (Number of Licensed Doctors + Number of Licensed Assistant Doctors) / Population *1,000. The population is the figure of household registration from the Ministry of Public Security.

Number of beds of hospitals and health care per 1,000 population = (number of beds of hospitals + number of beds of health care) / population *1000. The population is the figure of household registration from the Ministry of Public Security.

South Africa

Documents on higher education include: Higher diploma, Post higher diploma, Bachelors degree, Honours degree, Higher degree.

Footnotes

Brazil

 (8) Data in concentration (g/m³) for some metropolitan areas (Recife, Salvador-Camaçari, Belo Horizonte, Vitória, Rio de Janeiro, São Paulo, Curitiba, Porto Alegre and Distrito Federal) no weighting by population.

Russia

(1) Total freshwater use.

(2) Year-end data.

(7) By data of Rosgidromet. Data on greenhouse gases emissions in terms of carbon dioxide equivalent, with the account of land use, changing in land use and forestry are taken from the Russian national inventory of antropogenic emissions by sources and absorption by absorbents of greenhouse gases not regulated by Montreal Protocol for 1990-2014 years.

(10) Emissions from stationary sources.

India

(4) The data pertains to 2015 assessment. The data for the entire country was procured from National Remote Sensing Centre (NRSC), Hyderabad in digital format corresponding to the period Oct 2013- Feb 2014. The data has been updated from India State Forest Report which is a Biennial Report.

(9) Per capita carbon dioxide emission pertains to emission by fuel combustion only. Emission are calculated using the IEA's energy balance and the Revised 2006 IPCC Guidelines. The figure including Land Use Change & Forestry was 0.7 MT in 2000 and 1.08 MT in 2007 as per 'India Second National Communication to the United Nations Framework Convention on Climate Change', Ministry of Environment & Forests.

(11) Data relates to agriculture year (i.e. July of the year indicated in the table to June next Year) and pertains to perennial horticultural crops.

(12) Data (except for 2013, 2014 and 2015) relates to agricultural year (i.e. July of the year indicated in the table to June next year) and is based on Land Use Statistics. Information for 2013, 2014 and 2015 are based on Estimation by Forest Survey of India.

China

(3) Total freshwater use.

(5) Data are from World Bank WDI Database, calculating by using "permanent cropland (% of land area)" multiply "land area of China".

(6) Data of sulfur dioxide emissions per capita refer to the ratio of the volume of sulphur dioxide emission to the average population of the year.

Footnotes

(1) The data are constant estimates based on studies conducted by Central Water Commission on Reassessment of water resources.

- (2) Includes both terrestrial and marine protected areas.
- (3) Includes National Parks, Wild Life Sanctuaries, Conservation Reserves & Community Reserves.

(4) As on 31st March/1st April.

(5) Data from 2009 onwards may not be strictly comparable with earlier years due to change in nomenclature, rationalisation and classification of reporting.

(6) Provisional data.

(7) Expenditure on environment is as per financial year (i.e. April of the year indicated in the table to March next year) and GDP estimate is based on current market price.

(8) Expenditure on enviornment data for 2013 pertains to expenditure as on 31st March, 2014.

(9) Revised Estimate.

(10) Expenditure on environment data for 2015 pertains to expenditure as on 31st January, 2016 as per sanctions.

(11) Expenditure on environment data for 2016 pertains to expenditure as on 31st December, 2016.

(12) Year 2013 stands for 2013-2014; Year 2014 stands for 2014-2015; Year 2015 stands for 2015-2016.

Graph 7.1 Utilization of Forest Area, 2015

Explanatory Notes:

Brazil

Fresh water resources Historical Average 214,361 is the best information available until 2012.

Sulfur dioxides emissions per capita Data in concentration (g/m³) for some metropolitan areas (Recife, Salvador-Camaçari, Belo Horizonte, Vitória, Rio de Janeiro, São Paulo, Curitiba, Porto Alegre and Distrito Federal) no weighting by population.

Utilization of perennial crop area Permanent crops is the land cultivated with long-term crops which do not have to be replanted for several years (such as cocoa and coffee); land under trees and shrubs producing flowers, such as roses and jasmine; and nurseries (except those for forest trees, which should be classified under "forest"). Permanent meadows and pastures are excluded from land under permanent crops.

Carbon dioxide emissions per capita There has been a modification in the figures due to updating the estimates presented at the 3rd National Communication of Greenhouse Gases.Estimates updated in 2015 cover the GHG emissions in the 1970-2014 period for all sectors, except for change of land use, which covers the 1990-2014 period.

The methodological basis for the estimates is the Brazilian Inventory of Anthropogenic Emissions and Removals of Greenhouse Gases, published by Brazilian Ministry of Science, Technology, Innovation and Communication. For agriculture, energy, industry processes and waste sectors the 3rd Inventory methodology has been used. As for land use changes the methodology used was that from the second inventory.

Russia

Perennial crop area is the part of utilised agricultural area taken up by perennial crops (fruit and berry plantations, grapes, tea, hop, etc).

Freshwater resources include internal renewable freshwater resources (river flows and groundwater from rainfall

in the country).

Annual flows (annual freshwater using) are water withdrawals, not counting losses from storage basins.

Freshwater use - use of water resources taken from various sources (including seawater) to meet domestic needs. This does not include turnaround water consumption, as well as recycling of sewage and collector-drainage water.

Proportion of wastewater treated is defined as the ratio of the volume of normatively pure water and water normatively purified at wastewater treatment plants to the total wastewater (sewage) discharge volume into surface water bodies (%).

India

Per capita carbon dioxide emission This has been derived by dividing total carbon di oxide emission by mid year population. Figures indicating net carbon di oxide emission (including removal) with land use change and forestry are occasionaly communicated to United Nations Framework Convention on Climate Change by Ministry of Environment & Forests. However, the time series information provided in table 7.1 relates only to emission by fuel combustion using sectoral approach, as provided by International Energy Agency.

Perennial crop includes all fruits, nuts & plantation crops.

China

Total water resources refer to total volume of water resources measured as run-off for surface water from rainfall and recharge for groundwater in a given area, excluding transit water.

National protected area refers to certain areas of land, waters or sea that are representative in natural ecological systems, or are naturalhabitats for rare or endangered wild animals or plants, or water conservation zones, or the location of important natural or historicrelics, which are demarked by law and put under special protection and management. Natural reserves are designated by the formalapproval of governments at and above county level. Scenic spots and cultural preservation zones are not included.

Investment in the treatment of environment pollution refers to the proportion of investment in fixed assets in the total investment in harnessing industrial pollution and in the construction of urban environment infrastructure facilities. It includes investment in harnessing sources of industrial pollution, investment in environment protection facilities designed concurrently with construction projects, and investment in urban environment infrastructure facilities.

Permanent cropland is land cultivated with crops that occupy the land for long periods and need not be replanted after each harvest, such as cocoa, coffee, and rubber. This category includes land under flowering shrubs, fruit trees, nut trees, and vines, but excludes land under trees grown for wood or timber.

Graph 8.1 Index of Industrial Production

8

(1) Preliminary data for 2016.

Explanatory Notes:

Brazil

The reported data on Output of main industrial product reflect production by manufacturing units with more than 30 employees.

Production of mobile cellular subscriptions reflects the national production of mobile celular.

Russia

Index of industrial production is the aggregate index by kinds of economic activities "Mining and quarryng ", "Manufacturing", "Electricity, gas and water production and supply" before 2014 year and since 2014 year - by kinds of economic activities "Mining and quarryng ", "Manufacturing", "Electricity, gas, steam and air conditioning supply", "Water supply, water removal, waste management, activity on liquidation of pollution".

India

Index of industrial production is a simple weighted arithmetic mean of production relatives, the weights being proportional to gross value of output as available from Annual Survey of Industries (ASI) factory sector. At the industry indicator levels, the weights were allocated in proportion to their gross value of output.

The new series of All India Index of Industrial Production (IIP) with base 2004-05 has a broader coverage of 682 items (clubbed in 399 item groups: Mining-1, Manufacturing – 397, Electricity – 1) comprising 61 from Mining & Quarrying, 620 from Manufacturing and 1 from Electricity Sector having the weightage of 14.16%, 75.53% and 10.32% respectively in the all-India IIP. National Industrial Classification (NIC)-2004 is being followed.

China

Industrial production index refer to the indices of the PPI-deflated value added of industry (% to the previous year) covering industrial enterprises above the designated size. Industrial enterprises above the designated size refer to those with annual revenue from principal business over 20 million yuan from 2011 on and over 5 million yuan prior to 2011.

Sawnwood refers to manufactured woods using wood sawing machine or manual tools to process log into formation of wood of certain width and thickness of sectional dimensions along longitudinal direction.

Footnotes

Mtoe stands for millon tonnes of oil equivalent, kgoe stands for kilo gram of oil equivalent and ktoe stands for kilo tonnes of oil equivalent.

Brazil

(1) Primary energy production: includes natural gas rejected and non-utilized.

(6) Total consumption, total primary energy supply, or gross domestic supply: includes sectorial final energy consumption; losses in transformation, distribution and storage; and energy sector final consumption.

(8) Energy consumption per capita = total consumption/population.

(13) Gross generation + net imports.

(17) (Gross generation + net imports) / mid-year population.

Russia

(10) Source: Sustainable Development Goals Indicators, UNSD Database.

India

Information pertains to financial year (i.e. April of the year indicated in the table to March next year). Conversion

factors have been used for providing data in oil equivalents.

(2) Primary energy comprises of coal, lignite, crude petroleum, natural gas and electricity. Elecricity includes hydro, nuclear and other renewable energy. The conversion factor (production to energy terms) for each energy product has been updated as per the latest available information and accordingly data for the year 2006 to 2015 has been updated.

(3) Provisional data.

(5) The conversion factor (production to energy terms) for each energy product has been updated as per the latest available information and accordingly data for the year 2006 to 2015 has been updated.

(7) Includes energy from coal, lignite, crude petroleum (Crude oil in terms of refinery crude throughput), Natural gas & electricity (hydro, nucler & other renewable sources electricity from utilities). The conversion factor (production to energy terms) for each energy product has been updated as per the latest available information and accordingly data for the year 2006 to 2015 has been updated.

(14) (Gross generation + net imports) / mid-year population. As on 31st March of the year.

(15) Estimated from per capita consumption at the end of 8th and 9th Plan i.e. March 1997 & March 2002.

China

(4) Electric power in total primary energy production and total consumption of energy are converted on the basis of equal caloric value.

(9) Energy consumption per capita is calculated by annual average population.

(16) Share of renewable energy in total energy consumption, include transformation losses and other losses.

South Africa

(11) Physical energy flowing out of South Africa as measured by the metering system at the South African borders.

(12) Physical energy flowing into South Africa as measured by the metering system at the South African borders.

Table 9.2 - Energy Balance - Brazil, Russia, India, China - 2015

Footnotes

Notes common for all countries.

- (a) mtoe means million tons of oil equivalent.
- (b) kgoe means kilogram of oil equivalent.

Brazil

- (1) Primary energy production includes natural gas rejected and non-utilized.
- (2) Electricity includes hydro, uranium and wind.
- (3) Exports include bunkers.
- (11) Balance includes only natural gas rejected and non-utilized. It is calculated from other data in the table.
- (12) Consumption per capita = total consumption / population.

(13) Total consumption, total primary energy supply, or gross domestic supply: includes sectorial final energy consumption; losses in transformation, distribution and storage; and energy sector final consumption.

Solids: mineral and coal derivatives (other than coke oven gas), firewood and charcoal, sugarcane bagasse, liquor, biomass (other renewable) and other primary remaining.

Liquids: oil and derivatives, molasses, cane juice, ethanol, vegetable oils (other renewable) and NGL (other nonrenewable).

Gases: natural gas, coke oven gas, biogas (other renewable) and industrial gas (other non-renewable).

Electricity: hydraulics and electricity, uranium (U308) and derivatives, and wind.

Russia

(4) Coal, fuel peat, wood for fuel.

(5) Oil extracted including natural gas liquids (NGL), products of fuel processing, combustible (fuel) supplementary energy resources.

(6) Electricity and heat.

India

(7) Primary energy production includes Coal & Lignite as solids, Curde Petroleum as liquids, Natural Gas as gas, and hydro & nuclear electricity from utilities as electricity nuclear, hydro, solar, wind, others.

(8) Thermal electricity is not a primary source of energy.

(14) Consumption includes coal & lignite as solids, crude petroleum as liquids, natural gas as gas, and hydro & nuclear electricity from utilities as electricity nuclear, hydro, solar, wind, others.

(15) While calcuating consumption per capita, mid year population has been used.

(16) Due to non availability of data the consumption value is taken equivalent to production value.

(17) Crude oil in terms of refinery crude throughput.

(18) Include Hydro, Nuclear and other renewable sources electricity from utilities.

China

(9) Primary energy production Solids refer to coal. Liquids refer to petroleum. Gas refers to natural gas. Electricity refers to hydro power, nuclear power, electricity generated by other means such as wind power and geothermal power, and other energy.

(10) Data on imports and exports are from Customs statistics. The refueling by Chinese ships and airplanes abroad is included in imports. The refueling by foreign ships and airplanes in China is included in exports.

Table 9.2.1 - Summary of Energy - Brazil

	2000	2007	2008	2009	2010	2011	2012	2013	2014	2015

Source

Ministry of Mines and Energy of Brazil. Brazillian Energy Balance 2016.

Footnotes

- (1) Consumption of crude petroleum refinery oil input.
- (2) Consumption of petrol only motor gasoline (alcohol and biodiesel not included).
- (3) Electricity consumption not include energy consumption in energy sector and losses.
- (4) Energy production from thermal includes oil procucts, natural gás, industrial gas, coal and biomass.

b) Central Electricity Authority, Ministry of Power.

Footnotes

(1) crude oil in terms of refinery crude throughput. MMT means million metric tonnes.

(2) kWh means Kilo Watt Hours.

(3) Provisional data.

(4) It includes utilities and non-utilities.

(5) It consists of hydro, nuclear, thermal & other renewable sources.

(6) Utilities: undertakings of which the essential purpose is the production, transmission and distribution of electric energy. These may be private companies, cooperative organisations, local or regional authorities, nationalised undertakings or governmental organisations.

(7) From 1995-96 onwards, thermal includes renewable energy sources also.

(8) Non-utilities: An Independent power producer which is not a public utility, but which owns facilities to generate electric power for sale to utilities and end users. They may be privately held facilities, corporations, cooperatives such as rural solar or wind energy producers, and non-energy industrial concerns capable of feeding excess energy into the system information pertains to Financial Year (i.e. April of the year indicated in the table to March next year).

Table 9.2.5 - Summary of Energy - South Africa, 2014 ⁽¹⁾

Source

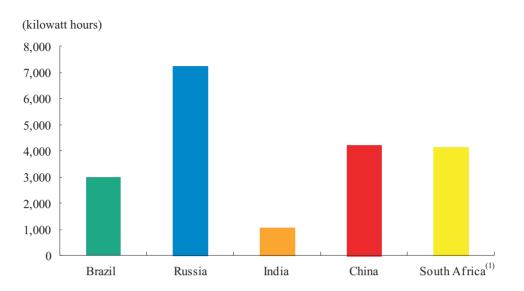

Department of Energy.

Footnote

(1) There is no row for losses in the % section and therefore the slight imbalance.

(2) Nuclear figure is derived from electricity produced from nuclear plants based on 33% efficiency.

Graph 9.1 Electricity Consumption per Capita, 2015

(1) Estimate of 2014.

Explanatory Notes:

Brazil

Consumption of crude petroleum: refinery oil in put.

Consumption of petrol does not include alcohol and biodiesel. It includes only motor gasoline.

Energy production from thermal includes oil procucts, natural gás, industrial gas, coal and biomass.

Primary energy production includes natural gas rejected and non-utilized.

Exports include bunkers.

Total consumption includes sectorial final energy consumption; losses in transformation, distribution and storage; and energy sector final consumption.

Solids: mineral and coal derivatives (other than coke oven gas), firewood and charcoal, sugarcane bagasse, liquor, biomass (other renewable) and other primary remaining.

Liquids: oil and derivatives, molasses, cane juice, ethanol, vegetable oils (other renewable) and NGL (Other nonrenewable).

Gases: natural gas, coke oven gas, biogas (other renewable) and industrial gas (Other non-renewable).

Electricity: hydraulics and electricity, uranium (U308) and derivatives, wind and solar.

Share of renewable energy in energy consumption is the renewable energy diveded by the total primary energy supply= final energy consumption + losses in the energy processing and transfering + energy sector consumption + statiscal differences.

Russia

Electricity production refers to gross production of electricity.

India

Total primary energy production: Primary energy does not include thermal electricity.

Electricity consumption per capita = (Gross generation + Net imports) / Mid year population.

China

Total primary energy production refers to the total production of primary energy by all energy producing enterprises in the country in a given period of time. It is a comprehensive indicator to show the level, scale, composition and pace of development of energy production of the country. The production of primary energy includes that of coal, crude oil, natural gas, hydro-power and electricity generated by nuclear energy and other means such as wind power and geothermal power. However, it does not include the production of fuels of low calorific value, bio-energy, solar energy and secondary energy converted from primary energy.

Total consumption of energy refers to the total consumption of energy of various kinds by the production sectors and the households in the country in a given period of time. It is a comprehensive indicator to show the scale, composition and pace of increase of energy consumption. Total energy consumption includes that of coal, crude oil and their products, natural gas and electricity. However, it does not include the consumption of fuel of low calorific value, bio-energy and solar energy. Total energy consumption can be divided into three parts: end-use energy consumption; loss during the process of energy conversion; and energy loss.

South Africa

General: The figures populated in this table have been derived from the south African Energy Balance for the respective years. The definitions/descriptions of all energy commodities and activities in our energy balances are aligned to international recommendations espoused in the International Recommendations on Energy Statistics (IRES) document and the IEA's Energy Statistics Manual.

Technical clarifications

Electricity, gas and steam production: We assumed that this include production of liquid fuels. **Nuclear:** The figures were derived using electricity produced with the assumption of 33% efficiency.

Private consumption was assumed to be residential + non-specified other under other sectors and any unspecified consumption.

Manufacturing: calculated as the sum of all all industries less commercial and construction.

Agriculture, Forestry, Animal Husbandry and Fishery

Footnotes

Brazil

- (1) Harvested area.
- (2) Provisional data.
- (6) Major cereals (corn, rice and wheat).
- (9) Major meat (beef, chicken and pork).
- (15) Fishery data refers only to the marine and continental extractive fisheries.

Russia

(3) The data are produced and disseminated by the Federal Service of State Registration, Cadastre and Cartography. At the end of the year.

- (10) Production of livestock and poultry for slaughter.
- (16) Removals of round wood (mln. dense cubic m). Since 2010 wood in the rough.

India

(4) The period of agricultural year is from July (of the year indicated in the table) to June (next year).

- (7) As per final estimate.
- (11) Preliminary data.
- (12) The data pertains to March (of the year indicated in the table) to February (next year).
- (13) Meat production from commercial poultry farm is included from 2007-2008.

China

(5) Data of area of cultivated land of China between 2000 to 2007 is calculated according to the "Communique of Main Data on Land Use Survey" from the First National Agricultural Census of China in 1996. Data of 2008 are from the "Survey of change of land". Data of 2009-2016 are from the "Communique on Land and Resource of China 2016" (released on April 2017 by Ministry of Land and Resources, PRC).

South Africa

(8) Major cereals (maize/corn, wheat, malting barley, sorghum).

(14) Major meat (beef and veal, mutton, goats, poultry).

(17) Cubic meters derived from figures in tons provided by DAFF in the report on commercial timber resources and primary roundwood processing in South Africa. Figures obtained from the report on commercial timber resources and primary roundwood processing.

Footnotes

- (1) Preceding year = 100.
- (2) Preliminary data.
- (3) Total sown area.
- (4) Since 2011, data are published in weight after processing.
- (5) Fruits (excluding nuts), berries and grapes.

(6) Before 2012 yield is given per 1 hectare of plants in fruit-bearing age; for 2012 – 2016 – per 1 hectare harvested area.

(7) Livestock and poultry for slaughter.

(8) Availability of tractors in agricultural organizations (excluding tractors with mounted digging, ameliorative and other machines), since 2008 excluding micro enterprises.

(9) Availability of harvesters and beet harvesting machines (excluding plant top gathering machines), since 2008 excluding micro enterprises.

(10) Mineral fertilizers used per 1 ha of crops in agricultural organisations, since 2008-excluding data on micro enterprises.

(11) Since 2010 - wood in the rough.

d) Ministry of Agriculture, 19th Livestock Census 2012.

Footnotes

(1) Provisional data.

- (2) Preceding year = 100 with Base Year Triennium 2007-2008.
- (3) The period of agricultural year is from July (of the year indicated in the table) to June (next year).
- (4) Data on livestock products pertains to March (of the year indicated in the table) to February (next year).
- (5) Meat production from commercial poultry farm is included from 2007-08 onwards.
- (6) Milk Includes cow, buffalo and goat milk.
- (7) Poultry eggs include eggs from fowls & ducks.

(8) Data on number of livestock is produced from Livestock Census which is conducted at a gap of five years.
Information from Last three census (2003, 2007 and 2012 Reference Date 15th October) has been included.
(9) Data for 2001/2002.

- (10) Data for 2006/2007.
- (11) Data for 2011/2012.

Footnotes

(1) Data of indices of agricultural gross output prior to 2003 are calculated at 1990 prices. The new classification for national standard of industry classification has been implemented since 2003 and the gross output value includes the services in support of agriculture, forestry, animal husbandry and fishery.

(2) Preceding year = 100.

(3) Ownership of tractors and harvester-threshers in agriculture at year-end includes large, medium and smallsized tractors, harvesters and threshers. Data from 2014 do not include threshers.

Footnotes

Data on commercial agriculture.

Graph 10.1 Production of Cereals

(1)Data for 2016 are provisional.

(2)Data for 2015 instead of 2016.

Explanatory Notes:

General:

Cultivated area: This consists of net area sown and current fallows.

Average yield of crops: Average yields per hectare of principal crops have been obtained by dividing the total production by the corresponding total area under each crop.

Brazil

Fruits production consideres the following fruits: orange, banana, grape, pineapple, papaya, watermelon, apple, coconuts, passion fruit, mango, tangerine, lemon, melon, guava, peach, persimmon, avocado, cashew nuts, fig, pear, nut, quince.

Cultivated area includes only harvested area.

Milk data obtained in litres were converted to kg (1kg = 1.03 litre).

Major part of 2016 final data will be available only on September 2017.

Catch of fish data not available after 2011.

Timber production harvested round wood from forestry areas, which is used for wood pulp production and other purposes such as furniture, shipbuilding and construction. It does not include firewood.

Amount of pesticide use per unit of cultivated land (kg/ha) refers to national consumption of active ingredients of pesticides and related by planted area (kg / ha).

Russia

Agricultural production is the sum of crop-growing and animal husbandry outputs of all agricultural producers including enterprises of private sector (household enterprises, peasant (farm) enterprises and individual employers) in value terms at actual current prices. To calculate agricultural production index, the indicator of production volume at comparable prices of previous year is used.

India

Ministry of Agriculture is the nodal agency for collection, compilation & dissemination of agriculture statistics in India.

Directorate of Economics & Statistics in Department of Agriculture & Cooperation, Ministry of Agriculture is the agency primarily involved with Crop statistics and the reporting period for the same is agricultural year i.e. July to June next year whereas Department of Animal Husbandry, Dairying & Fisheries, Ministry of Agriculture produces & disseminates information on livestock with Financial Year as the reporting period (i.e. March-February next year).

China

Indices of agricultural gross output is the development rates of agricultural gross output value deflated by using producers prices indices.

Timber production refers to the volume of timber measured and accepted based on the national timber standards after the procedures of logging, bucking, yarding, and finally transporting to timber depots or defined distribution sites.

Amount of pesticide use per unit of cultivated land refers to the ratio of total volume of pesticides used to the cultivated area in the same period, usually kg/ha. or kg/mu used as measurement unit.

Footnotes

Russia

(2) Length of public paved roads in operation (including highways). At the end of the year.

(3) Preliminary data.

India

(1) The information is as on 31st March of the Year indicated in the table. The information on Highways includes both National and State Highways (Excluding Rural Roads, Project Roads, Urban Roads etc).

- (6) Reference Period is Financial Year i.e. (April of the Year indicated in the Table to March next year).
- (7) The figures include crude oil and natural gas pipelines also.

China

(4) Since 2013, there have been some changes on the classification, so the data from 2013 and on can not be compared with the previous ones.

(5) Since 2013, the statistical coverage of pipeline transport has included China National Offshore Oil Corporation on the basis of China National Petroleum Corporation and China Petroleum & Chemical Corporation.(8) All means: including railway, road, waterway and air.

(9) All means: including railway, road, waterway, air and pipeline.

Footnotes

(1) It refers to paid traffic domestic and international.

(2) Estimates.

- (3) It refers to the interstate and international collective passenger transport.
- (4) Refers to passenger and freight volumes. "Number of international airlines service routes" was a number of international flights made with at least one point of origin / destination abroad.
- For example, Flight No. 8108 of the company Latam of route GRU-CDG, if it was carried out every day of January, would count 31 times in that month.

Footnotes

Information on Railways, Civil Aviation & production of vehicles pertains to Financial Year i.e. April (Year Indicated in the table) to March (Next Year) whereas that for registered vehicles /ownership is as on 31st March and that on accidents, injuries and deaths pertains to calendar year.

(1) It includes passenger vehicles (PVs), commercial vehicles (CVs), three wheelers, two wheelers.

(2) Includes Cars, Jeeps, Taxis, Buses and Omnibuses. Data is as on 31st March of the year indicated in the table.

(3) Figures indicate number of cars registered in India as on 31^{st} March of the year indicated in the table except for 2000 where the data is as on 31^{st} March 2001.

- (4) FreightTonne Kilometer carried by Blue Dart in 2014-15 is not included in this figure.
- (5) Figures for Road Transport from 2006-07 to 2014-15 are estimated.
- (6) Figures for Road Transport from 2007-08 to 2014-15 are estimated.

Footnotes

(1) Since 2013, the statistical coverage of pipeline transport has included China National Offshore Oil Corporation on the basis of China National Petroleum Corporation and China Petroleum & Chemical Corporation.

(2) The indicator "Length of Domestic Civil Aviation Routes" has been changed to "Length of Domestic Regular Civil Aviation Routes" from the year of 2011 but the coverage of the statistics remains stable.

(3) The indicator "Number of Civil Airports" has been changed to "Number of Regular Civil Aviation Airports" from the year of 2011, but the coverage of the statistics remains unchanged.

(4) The ownership of automobiles excludes three-wheel vehicles and low-speed trucks.

(5) The number of passenger cars includes the number of small passenger vehicles and minicars.

(6) Since 2013, there have been some changes on the classification, so the data from 2013 and on can not be compared with the previous ones.

c) Transnet.

Footnotes

(1) Passenger Rail Agency of South Africa.

(2) These figures cover Metro rail only.

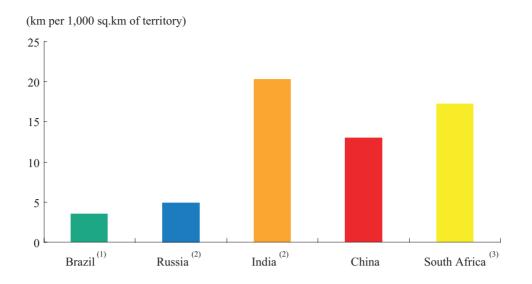

(3) Transit Pipelines.

(4) The Land Transport Survey is a monthly survey which covers passenger and freight transportation by rail and road in South Africa. This survey is based on a sample drawn from the 2010 Business Sampling Frame (BSF) that contains businesses registered for value-added tax. This survey has replaced the Land Freight Survey which was discontinued in 2003, and was re-engineered from 2008.

(5) Estimates.

(1) Estimates for year of 2014.

(2) Estimates for year of 2015.

(3) Estimates for year of 2010.

Explanatory Notes:

Brazil

Length of highways refers to federal, state and municipal highways, excluding planned highways. Information on federal highways was published in December 2016 at www.dnit.gov.br.

Russia

Passenger traffic (all means) passenger turnover which is determined multiplying the number of passengers for each position of transportation by the length of distance covered in km. Total passanger turnover is the sum of passanger turnover of the railway, bus, passenger taxi, tramway, trolley-bus, subway, maritime, inland water and air transport.

Freight traffic (all means) freight turnover which is calculated multiplying the weight of shipped freight in tons by the length of its shipping in kilometers. Total freight traffic is the sum of freight turnover of the railway, motor, pipeline, maritime, inland water and air transport.

Public roads refer to the federal roads of federal property; regional and inter municipal roads of the property of constituent entities of the Russian Federation; local roads of the property municipalities as well as of property of settlements, municipal and city districts.

India

Length of railways in operation This indicates total route kilometers, both electrified and non electrified.

Length of highways excludes urban and project roads.

Length of petroleum pipelines includes both onshore & offshore infrastructure.

Civil aviation: information on air traffic and air operations includes operations of Indian Carriers on scheduled both domestic and international services.

China

Length of railways in operation refers to the total length of the trunk line for passenger and freight transportation (including both full operation and temporary operation).

Length of highways refers to the length of highways which are built in conformity with the grades specified by the highway engineering standard [Highways WTBZ-Technical Standard JTJ01-88] formulated by the Ministry of Transport, and have been formally checked and accepted by the departments of highways and put into use.

Length of petroleum pipelines refers to the actual transport distance of oil (or gas) products, which is in general calculated according to the length of single pipeline.

Freight traffic (passenger traffic) refers to the sum of the product of the volume of transported cargo (passengers) multiplied by the transport distance in a given period of time.

Freight traffic of petroleum pipelines refers to the total amount of oil (or gas) transported through petroleum pipelines.

Length of domestic regular civil aviation routes refers to the total length of all domestic periodic civil aviation routes during statistical period.

Number of regular civil airports opened refers to the total number of areas assigned for civil aviation flights to do take-off, landing, taxiing, parking and other actions.

Ownership of automobiles refers to the total number of vehicles that are registered and received vehicles license tags according to the Work Standard for Motor Vehicles Registration formulated by the Transport Management Office under the Department of Public Security at the end of the reference period.

Footnotes

Brazil

(7) Considering population from 10 years old and above.

(10) Until 2012, comprised only persons who accessed the Internet by personal computer and from 2013 onwards, by any equipment.

Russia

(4) Number of user's devices of mobile radiotelephone (cellular) communication. At the end of the year.

(13) Until 2013 year - according to the World Bank data. Since 2013 the indicator is calculated by Rosstat as the ratio of the population aged 15-72 years using the Internet within 12 months to the total number of the population aged 15-72 years.

(16) Newspapers issued 3 and more times per week (number of titles).

India

(1) Data is as on 31st December of the year indicated in the table except for 2000 where it is as on 31st March of the year 2001. Data for main telephone lines pertains to wireline whereas that for cellular mobile telephone pertains to wireless subscription in case of India.

(11) Information for 2000-2012 is as per ITU database whereas data for 2013 to 2015 is as provided by Telecom Regulatory Authority of India and is on as 31^{st} December of the year indicated in the table.

(14) Data relates to 31^{st} March of the year indicated in the table except for 2000 where the same is as on 31^{st} December 2000 .

China

(2) PHS subscribers are also included in those of the main telephone lines.

(8) National Bureau of Statistics of China started an national household survey in 2013-2014, including both urban and rural households. The coverage, methodology and definitions used in the survey are different from those used for the separated urban and rural household surveys prior to 2013.

(15) Kinds of newspapers.

South Africa

Household based question

(3) Does the household have access to a telephone line in the dwelling or household? Calculation: Households with a telephone/total population x 1000. Survey data.

(5) Does the household have access to a cell phone in the dwelling or household? Calculation: Households with at least one mobile phone/total number of households x 1000. Survey data.

(6) Reported data on total number of cellular subscriptions from service providers (on Independent Communication Authority of SA website) / total population x 1000.

(9) Does the household have access to a computer in the dwelling or household? Question was only asked in 2005, 2012 and 2013.

(12) Does the household have access to an internet connection in the dwelling or household? Available 2009-2013.

(17) Number of current daily newspapers, including those not printing on weekends and pubic holidays.

12

Footnotes

(1) Until 2013 year - according to the World Bank data. Since 2013 the indicator is calculated by Rosstat as the ratio of the population aged 15-72 years using the Internet within 12 months to the total number of the population aged 15-72 years.

(2) Until 2014 year - by data of Household budget sample surveys, at the end of the year. Since 2014 - by data of Sample survey of population on using of information technologies and information-telecommunication networks.

Footnotes

(1) Data points for internet connections per 1,000 inhabitants available for 2009. The question was not asked prior 2009.

(2) Data points for computers per 1,000 inhabitants available for 2005, 2012-2016. The question was not asked in the other years not populated.

Graph 12.1 Number of Subscribers of Cellular Mobile Telephones

12

(1) Data for 2012 instead of 2016.

Explanatory Notes:

Brazil

Reference period in the Brazilian surveys when asking about individual use of ICT refers about last three months according the international recommendation.

Number of Internet users per 1,000 Inhabitants It was considered the inhabitants 10 years old or over. Internet users - persons 10 years old or over who accessed the Internet somewhere (own home, workplace, center of free or paid access, home of other persons or any other place) by PC desktop or laptop (notebook, palmtop, pocket pc or handheld) at least once in the reference period of the last three months.

Russia

Main telephone lines are telephone sets having independent numbers at the public telephone station as well as telephones with a shared line intended for public use. They switched on the public network and render service of local, intercities and international communication.

Cellular communication mobile radio and telephone communication. Mobile communication - complex of technical means (radio and communication equipment, communication lines and structures), which render communication facilities for mobile subscribers and subscribers of public telephone network.

Data on organizations using personal computers and other information and communication technologies are given for organization which are under statistical observation (excluding small business).

India

Main telephone line relates to wireline connections i.e. connections with (fixed) telephone line connecting the subscriber's terminal equipment to the network. It includes WLL (fixed line extending upto the base unit).

Subscribers of cellular mobile telephone includes wireless connections.

Data on Internet user Includes information on subscription through both fixed lines as well as wireless (mobile phones) internet subscriptions.

Number of daily newspaper includes newspapers in all languages & bilingual/multilingual newspapers.

Total Internet subscribers comprises Narrowband Subscribers and Broadband Subscribers. This also comprises Wired Internet Subscribers & Wireless Internet Subscribers.

China

Main telephone line refers to a main line which is a (fixed) telephone line connecting the subscriber's terminal equipment to the public switched network and which has a dedicated port in the telephone exchange equipment. The number of ISDN channels are included. PHS subscribers are included.

Subscribers of cellular mobile telephone refer to number of portable telephone users subscribing to a public mobile telephone service and have access to Public Switched Telephone Network (PSTN) using cellular technology. This includes analogue and digital cellular systems.

Internet Users refer to the inhabitants aged 6 or above and have connected with Internet at least once in the last 6 months.

Number of daily newspapers includes all kinds of newspapers, with CSSN (China Standard Serial Number).

Fixed broadband Internet access refers to those users registered accessing to the public internet through xDSL, FTTx+LAN, FTTH/O and other broadband access methods at the end of the reference period. By the administrative area, the internet broadband access users can be divided into urban and rural broadband access users. Breaking down by customers, they can be divided into household broadband access users and office broadband access users.

Time length accessed to fixed broadband Internet refers to the actual time use by the fixed broadband Internet

access users in the enterpriese connected to the public Internet through the fixed broadband network at the end of the reference period.

Flow volume accessed to mobile Internet refers to the flow volume occured by the mobile phone users (including wireless LAN users)in the enterprise accessing to the public internet or WAP site through the mobile communication network, including uplink and downlink flow.

Length of optical cable lines refers to the sum of the length of the trunk line of the local network, the length of the cable line of the access network, and the length of the long distance optical cable line at the end of the reference period.

Length of long distance optical cable lines refers to the actual length of the long distance optical cable used to realize the transmission of optical signals. Overhead cable length is calculated by the actual length of rod road; cable length buried in the underground, underwater, submarine pipelines is based on the channel or pipe length.

Base stations of mobile telephones refer to all the sets of facilities that provides service for wireless receiving and transmitting apparatus for residence, processing the mobile wireless communication between base station and the mobile station, playing relay function between the mobile switching and the mobile stations, monitoring the quality of wireless transmission at the end of the reference period.

Broadband Internet access ports refer to all kinds of broadband internet access ports acturally installed and operated for the access of the innternet users, and do not include narrowband dial-up access ports. According to the main technical modes at present used for the broadband internet access, the xDSL port, LAN port and FTTH/ O port are used.

Number of websites refers to the websites with the domain name or "WWW.+ domain name" as their site addresses, of which, including China's country websites of the top-level domain name (CN) and category top level domain name (gTLD). These domains are registered within the territory of China.

South Africa

Household based question.

Does the household have access to a telephone line in the dwelling or household?

Does the household have access to a cell phone in the dwelling or household?

Does the household have access to a computer in the dwelling or household? Question was only asked in 2005, 2012 and 2013.

Does the household have access to an internet connection in the dwelling or household? Question was asked in 2005, and then again in 2009, 2010. Available 2009-2013.

Not access to outside sources, just whether they have access in the household.

Footnotes

Brazil

- (1) The general government includes federal government, state governments, and local governments, and
- excludes Central Bank of Brazil and public enterprises.
- (2) Nominal result.
- (7) Total tax revenue corresponds to the fiscal load.
- (10) The Annual average exchange rates used is available in Tables 13.2.1 and 14.1.

(3) Share of deficit/surplus of Federal budget to GDP. The calculation carried out on the basis of data of the Federal Treasury.

(8) Share of income tax of individuals to revenue. The calculation carried out on the basis of data of the Federal Treasury.

(11) The calculation is according to the data of Bank of Russia.

India

(4) For all Information, reference year is Financial Year (i.e. April of the year indicated in the table to March next year). For example, figure given for year 2000 here is virtually for financial year 2000-01 which means April, 2000 to March 2001. This is applicable for each other figure in the row.

(5) The data relates to revenue deficit of general government i.e. central government & state governments combined. For 2011 to 2015, figures given are based on GDP figures relating to new series (i.e. Revised Base year 2011-12=100) and worked out at current market price. Information since 2014 is provisional.

(9) Revenue pertains to general government includes both revenue & capital receipts. Income tax includes personal income tax & corporation tax only. Income tax is collected by central government only.

(12) Includes currency with public, deposit money of the public and post office saving bank deposit. M_2 supply (year end) in million US \$ has been calculated on the basis of year end exchange rate of the concerned financial years.

China

(13) M₂ is calculated using the year-end exchange rates released by State Administration of Foreign Exchange.

South Africa

(6) Fiscal year: year begins on 01 April to 31 March of the following year.

(14) Calendar year : year begins on 1 January to 31 December(year-end). Year end exchange rates are used.

M₂ comprises:

* notes and coins in circulation outside monetary sector.

- * cheque and transmission deposits.
- * other demand, short & medium term deposits up to 6 months.
- * Monthly average exchange rates at year end.

Sources

a) Ministry of Finance, Union Budget (various issues).

b) Reserve Bank of India, HandBook of Statistics on Indian Economy and Bulletin on Money Stock Measures (various issues).

Footnotes

For all Information, reference year is Financial Year (i.e. April of the year indicated in the table to March next year). As regards foreign exchange reserves, they are given as at the end of financial year i.e. 31^{st} March (Next year).

(1) Total receipts and total expenditures pertains to central government receipts and expenditure. This data is not comparable with previous year's data as past data consists of consolidated receipts and expenditures of central and state governments. Revenue receipts consists of tax receipt and non tax receipts.

(2) The information relates to expenditure (both Plan and Non Plan) by Ministries/Departments of Centre and Union Territories including Plan expenditure of States.

(3) For 2011-12, data on deposit rates and Base rates of 5 major public sector banks refer to Rate for the period up to July 31, 2010. From July 1, 2010 BPLR System is replaced by Base system. Accordingly the data reflects the Base Rate of five major public sector banks. Data for 2010-11 for call / notice money rates are average of April-July 2010.

(4) Savings deposit rates from 2011-12 onwards relates to balance up to 1 Lakh. Savings deposit rate was deregulated with effect from October 25, 2011.

(5) All data are budget estmates.

Table 13.2.4 - Selected Data on Finance - China

Sources

a) Ministry of Finance of the People's Republic of China.

b) The People's Bank of China.

Footnotes

(1) Since 2009, there have been some changes on the classification of expenditure, so the data can not be compared with the previous ones.

(2) Currency issued on million US\$ is calculated using the year-end exchange rates released by State Administration of Foreign Exchange.

(3) Deposit rates and lending rates refer to the one-year official interest rates of deposits and loans of financial institutions.

South African Reserve Bank.

Footnotes

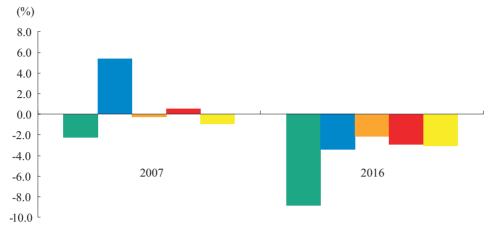

Government finance in fiscal years; year begins on 01 April to 31 March of the following year.

(1) No definition available for some of the tax categories. Total net tax revenue minus the detail of all available categories. This also includes the adjustments made for South African Customs Union transfers and VAT refunds. (2) M_3 is the broadly defined money supply aggregate officially used in South Africa.

(3) The prime overdraft rate serves as a market reference or benchmark rate for interest rates, but does not determine interest rates.

Graph 13.2 Share of Income Tax to Revenue

(1) Data relates to 2009 instead of 2016.

(2) Share of income tax of individuals to revenue.

Explanatory Notes:

Brazil

Share of Deficit (-) / Surplus of General Government to GDP - The general government includes federal government, state governments, and local governments, and excludes Central Bank of Brazil (Bacen), and public enterprises. Nominal result.

Share of income tax to revenue - Total tax revenue corresponds to the fiscal load.

M₂ supply (end of the year) - The Annual average exchange rates used is available in Tables 13.2.1 and 14.1. **Expenditure** - Data covers Federal Government only.

Other expenditure is the single largest item because it comprises transactions such as transfers to states and municipalities and debt management expenditure.

Russia

Budget revenues - monetary funds coming to the budget, excluding funds which in accordance to the Budget Code of the Russian Federation are the sources of financing the budget deficit.

Budget expenditures - monetary funds paid from the budget funds, excluding funds which in accordance to the

Budget Code of the Russian Federation are the sources financing the budget deficit.

Deposit rate - average rate on deposits of individuals in credit institutions (including OAO Sberbank of Russia) for up to 1 year.

Lending rate - average rate on loans to corporate customers in credit institutions (including Sberbank of Russia) up to 1 year.

Annual rates are calculated as the average of monthly data.

India

General Government includes both central government and state governments.

Income tax: Income Tax Act, 1961 imposes tax on the income of the individuals or Hindu undivided families or firms or cooperative societies (other than companies) and trust (identified as bodies of individuals associated of persons) or every artificial juridical person. The inclusion of a particular income in the total incomes of a person for income-tax in India is based on his/her residential status. There are three residential statuses, viz., (i) Resident & Ordinarily Resident (Resident) (ii) Resident but not Ordinary Resident and (iii) Non Resident. There are several steps involved in determining the residential status of a person. All residents are taxable for all their income, including income outside India.

 M_1 = Currency with the Public + Deposit money of the Public

 $M_2 = M_1 + Post Office savings banks deposits.$

 $M_3 = M_1$ + Time deposits with banks.

 $M_4 = M_3$ +Total post office deposits.

China

Revenue of consolidated budget refers to income for the government finance through participating in the distribution of social products. It is the financial guarantee to ensure government functioning. The contents of government revenue have been changed several times.

Expenditure of consolidated budget refers to the distribution and use of the funds which the government finance has raised, so as to meet the needs of economic construction and various causes.

Share of deficit/surplus of general government to GDP = (Revenue of consolidated budget - Expenditure of consolidated budget)/GDP.

The contents of government revenue include the following main items:

a) Various tax revenues including domestic value added tax (VAT), domestic consumption tax, VAT and consumption tax from imports, VAT and consumption tax rebate for exports, business tax, corporate income tax, individual income tax, resource tax, city maintenance and construct tax, house property tax, stamp tax, urban land use tax, land appreciation tax, tax on vehicles and boat operation, ship tonnage tax, vehicle purchase tax, tariffs, farm land occupation tax, deed tax, and tobacco leaf tax, etc.

b) Non-tax revenue including special program receipts, charge of administrative and institutional units, penalty receipts and others non-tax receipts.

The contents of government expenditure include the following main items:

a) Expenditure for general public services; b) Expenditure for foreign affairs; c) Expenditure for national defence;
d) Expenditure for public security; e) Expenditure for education; f) Expenditure for science and technology;
g) Expenditure for culture, sports and media; h) Expenditure for social safety net and employment effort; i)
Expenditure for medical and health care; j) Expenditure for environment protection; k) Expenditure for urban and rural community affairs; l) Expenditure for agriculture, forestry and water conservancy; m) Expenditure for transportation; n) Expenditure for industry, commerce and banking, etc.

South Africa

 M_0 = Deposits of monetary institutions with the central bank and banknotes and coin in circulation outside the central bank.

 M_1 =Notes and coin in circulation plus cheque and transmission deposits and other demand deposits of domestic private sector with monetary institutions.

 $M_2 = M_1$ plus other short-term deposits held by the domestic private sector.

 $M_3 = M_2$ plus long-term deposits held by the domestic private sector.

Footnotes

Brazil

(10) Cash concept.

(15) Since April 2015, Brazilian Direct Investment (DI) data is presented in accordance with the sixth edition of Balance of Payments and International Investment Position Manual (BPM6), edited by IMF, which uses the principle of assets and liabilities instead of the directional principle. Additionally, new sources of information enabled the inclusion of flows of reinvested earnings from 2010 onwards. As of BPM6, the expression "FDI" was replaced by "Direct Investment - Liabilities".

Russia

(4) According to the Bank of Russia. The data are submitted according to the principle of assets/liabilities. The sign (-) means a decrease.

(11) At the end of the year.

(16) At the beginning of the year.

(17) Data are presented in accordance with the 6th version of the IMF's Balance of Payments and International Investment Position Manual.

India

(1) All information in case of India pertains to financial year (i.e. from 1st April of the year mentioned in the table to March end of next year).

(3) GDP estimates used are at current market prices (with base year revised 2011-12=100).

- (5) Information since 2014-15 is provisional.
- (12) Figures are as on 31^{st} March of the year indicated in the table.

China

(2) Data of imports and exports of goods and commercial services come from the State Administration of Foreign Exchange.

(6) Data of FDI come from the Ministry of Commerce of the People's Republic of China.

(8) Outflows of FDI from 2003 to 2006 did not include financial intermediation, data for 2007 and onwards included all sectors.

(14)The scope of external debt was adjusted based on the IMF Special Data Dissemination Standard (SDDS) and consequently the external data with full coverage was released, including the debt in RMB, in 2015 in China. The debt figure at the end of 2014 was also adjusted accordingly for the convenience of comparison. The earlier data related have not been adjusted.

South Africa

(7) These indicate on a net basis an increase in liabilities and a decrease in assets.

- (9) These indicate on a net basis a decrease in liabilities and an increase in assets.
- (13) This includes gold.

(2) Data for 2015 instead of 2016.

Explanatory Notes:

Brazil

Since April 2015, Brazilian **Direct Investment (DI)** data is presented in accordance with the sixth edition of Balance of Payments and International Investment Position Manual (BPM6), edited by IMF, which uses the principle of assets and liabilities instead of the directional principle. Additionaly, new sources of information enabled the inclusion of flows of reinvested earnings from 2010 onwards. As of BPM6, the expression "FDI" was replaced by "Direct Investment - Liabilities".

The title of the Table14.3.1 has been changed because the new balance of payments methodology (BPM6).

The Table 14.4.1 has been adjusted to the new balance of payments methodology (BPM6).

Russia

Export of goods - removal of goods (commodities) from the Russian Federation territory without of a guarantee of the return them back. Export includes the removal of domestically produced goods and reexport of goods as well. Domesticaly produced goods include also foreign manufactured goods imported into the country and significantly reprocessed and as a result changed their qualitative and technical characteristics. Re-exports - goods imported to the territory of the Russian Federation and then removed from its territory without payment of customs dues, taxes and application of embargo of economic restrictions. Recording of the good exports is realised by FOB prices or border prices of the exporting country.

Import of goods - importing of goods into the Russian Federation territory without a guarantee of the return them removed back. Imports include the brought goods for consumption in the economy and good imported into the country territory in according to the reimport system. Re-imported goods are those moved out from the Russian Federation territory and then moved in this territory without payment of custom dues, taxes and application of embargo or economic restrictions. Recording of the good import is realised by in franco-border prices of the importing country (CIF), i.e. prices of goods include expenditures on the insurance and transportation to the border of the importing country.

Balance of payments data are presented in accordance with the 6th version of the IMF's Balance of Payments and International Investment Position Manual.

In the table 14.2.2.1 data on import and export of Russia are presented about the major trade partners and BRICS countries.

India

Exports are credited to the country of final destination as declared by exporters in the shipping bill whether that country possesses a sea-port or not. The country of final destination is defined as that to which goods exported from India are intended to pass whether by sea and land or by sea only or by air without interruption of transit, save in the course of transhipment or transfer from one means of conveyance to another.

Imports are classified with reference to the countries whence they were consigned to India and not with reference to the countries whence they were shipped directly to India. The country of consignment is defined as that from which the goods have come whether by land or sea or by sea only or by air, without interruption of transit save in the course of transhipment or transfer from one means of conveyance to another. Thus, the countries where goods are consigned are not in all cases the countries of actual origin of goods produces in one country maybe purchased by a firm in another country and then dispatched after an interval to India.

The data for imports, exports and re-exports given are according to the Indian Trade Classification (based on harmonized Commodity description and coding system).

External debt to GDP includes Long term debts as Multilateral loans, bilateral loans, International Monetary Funds Trade Credit, External Commercial borrowings; non-Resident Indian deposits, Rupees debts and Short

term deposit.

Under current account of the BOP, transactions are classified into merchandise (export and imports) and invisibles. Invisible transactions are further classified into three categories, namely a) Service- travel, transportation, insurance, Government not included elsewhere (GNIE) and miscellaneous (such as, communication, construction, financial, software, news agency, royalties, management and business services); b) Income; and c) Transfers (grants, gifts, remittances, etc.) which do not have any quid pro quo. Under the Capital Account, capital inflows can be classified by instrument (debt or equity) and maturity (short or long term). The main components of the capital account include foreign investment, loans and banking capital. Foreign investment, compromising Foreign Direct Investment (FDI) & portfolio investment consisting of Foreign Institutional Investors (FIIs) investment, American Depository Receipts, Global Depository receipts, Global Depository receipts, Global Depository receipts, and trade credit) and banking capital, including non-resident Indian (NRI) deposits are debt liabilities.

China

Foreign trade statistics and coverage China's official external trade statistics is implemented by General Administration of Customs of the Peoples Republic of China. It's compiled from the declarations, which are made to the Customs by imports, exports or their agents and subject to verification by customs officers at the time of customs clearance. External Statistics comprise all merchandise passing through China's Customs territory (with the exceptions mentioned below). Including: goods from abroad entering customs warehouses, bonded areas or special economic zones (SEZ) and goods leaving abovementioned areas to abroad; goods for inward or outward processing or assembling and subsequent re-exportation or re-importation; goods on lease for one year or more; goods imported or exported by foreign-invested enterprises; international aid or donations, etc. Excluding: Customs statistics do not cover temporary imports or exports; goods on lease for less than one year; travellers' personal effects; ship's and aircraft' bunkers and stores obtained abroad; monetary gold and coins being legal tender; goods in transit through China.

Import and export valuation Imports are valued on a CIF basis, which is based on the transaction value and all freight, insurance and other charges incurred before discharging the goods at the first port of entry of China. Exports are valued on a FOB basis, which is based on the transaction value at China's port of shipment equivalent of the actual price at which the goods are sold. The statistical value is expressed in RMB and USD respectively. Any transaction value in terms of a currency other than RMB or USD shall be converted into RMB or USD at the exchange rate between issued by the State Administration of Foreign Exchange.

Trading partner The country of origin is recorded for imports while the country of final destination for exports. The country of origin refers to the country or region where the imported goods have been grown, mined or manufactured. If two or more countries (regions) were involved in the manufacture of the products, the place where the last substantial working or processing was carried out will be recorded as the country (region) of origin. However, the countries (regions) of origin of the imported goods are not quite clear will be recorded as "country unkown". The country of final destination refers to the country or region where the exported goods are to be consumed, utilized or further processed or manufactured. In instance where the country of final destination can not be ascertained, the exports will be credited to the final country (region) dispatched to as known at the time of exportation.

Inflows of FDI refer to the investments inside China by foreign enterprises and economic organizations or individuals (including overseas Chinese, compatriots from Hong Kong, Macao and Taiwan, and Chinese enterprises registered abroad), following the relevant policies and laws of China, for the establishment of

ventures exclusively with foreign own investment, Sino-foreign joint ventures and cooperative enterprises or for co-operative exploration of resources with enterprises or economic organizations in China. It includes the re-investment of the foreign entrepreneurs with the profits gained from the investment and the funds that enterprises borrow from abroad in the total investment of projects which are approved by the relevant department of government.

Outflows of FDI refer to investment made by domestic enterprises and organizations (referred to as domestic investors) in foreign countries and Hong Kong, Macao and Taiwan regions in the form of cash, in-kind, intangible assets and other ways, and the economic activities centering on controlling the operation and management of those foreign enterprises.

The balance of payments (BOP) is a statement that summarizes economic transactions between residents and nonresidents during a specific time period.

The International investment position (IIP) shows at a point in time the value of : financial assets of residents of an economy that are claims on nonresident or are gold bullion held as reserve assets; and the liabilities of residents of an economy to nonresidents.

Explanatory Notes:

General

Tourism, Rome 1963:

International visitor: An international visitor to a country is any person visiting that country on a foreign passport and the main purpose of whose visit is other than the exercise of an activity remunerated from within the country or establishment of residence in the country. This definition covers two segments of visitors: "Tourists" and "Same Day Visitors".

Brazil

Foreigner tourist arrival: Arrivals of non-residents persons across international borders of Brazil classified as a tourist (or overnight visitors), and with a stay for less than a year for any main purpose : 1- Personal (Holidays, leisure and recreation, Visiting friends and relatives, education and training, health and medical care, religion and pilgrimages, shopping and others) and Business and professional.

They are not counted as visitors/tourist: employed by a resident entity, border workers, seasonal workers, other short and long term workers, nomads and refugees, transit passengers not entering the economic and legal territory, crews on a public modes of transport, persons entering the country to establish there their country of residence, long- term students and patients and their family, diplomats, consular staff, military personnel and their dependants, armed forces on maneuver.

Russia

A tourist is a person who visits a country (place) of temporary stay in medical and treatment, recreational, cognitive, sports, professional, business, religious and other purposes without engaging in activities related to obtaining income from sources in the country (place) of temporary stay, for a period from 24 hours till 6 months or at least one night in the country (place) of temporary stay.

Foreign tourist Arrival is a trip made by a foreign citizen to the Russian Federation during the reporting period, with any primary purpose (business trip, rest or other personal goal), except for the purpose of employment in an enterprise registered in the Russian Federation, for a long-term education and training course in the Russian Federation. Travels of foreign service personnel (crews of public modes of transport), diplomats, consular staff, military personnel and their dependents are also not included in the number of foreign tourist arrivals.

India

A "foreign tourist" is a person visiting India on a foreign passport, staying at least twenty four hours in the country, the purpose of whose journey can be classified under one of the following headings:

(i) Leisure (recreation, holiday, health, study, religion & sport)

(ii) Business, family , mission, meeting.

China

Foreign tourists arrivals refer to foreign visitor arrivals who come to China (mainland) for sight-seeing, vacation, visiting relatives, medical treatments, shopping, attending conferences or to engage in activities of economic, cultural, sports and religious. In compiling statistics, each time of entering China (mainland) is counted as one person-time.

ANNEXURE - I A BRIEF OVERVIEW OF THE STATISTICAL SYSTEM OF BRAZIL

I. Organizational Structure of the IBGE

The Brazilian Institute of Geography and Statistics (IBGE) is ruled according to the Law n.° 5.878, of May 11th 1973, and the Statute –Decree n.° 3.740, of June 13th, 2003. It is linked to the Ministry of Planning, with the role of coordinating the Brazilian Statistical System and being the main producer of official statistics in Brazil.

The Brazilian official statistics are being produced by IBGE, Central Bank, ministries and statistical state agencies. IBGE is the official statistics bureau responsible for the production, analysis and dissemination of Statistical information (demographic, economic and social), as well as geographical, cartographic and geodetic information and those related to natural resources and environment.

IBGE besides its functions in the Statistical System is also the main producer of geo scientific information and has the role of coordinating the National Cartographic System. One of the main projects of the production of geo scientific information is the construction of the National Spatial Data Infrastructure – INDE. The purpose of the INDE is to catalogue, to integrate and harmonize geospatial data from Brazilian institutions, producers and sponsors of this kind of data, so that these data can be easily located, accessed and used for several uses and for any user who has Internet access.

IBGE is responsible for the construction, provision and operation of the Brazilian Geospatial Data Site-SIG Brazil, as well as for the management of the Brazilian Directorate of Geospatial Data-DBDG. It is also responsible to prepare the proposal for obtaining the necessary resources for the implementation and maintenance of INDE.

The programs carried out by IBGE are fundamental for both the government and the society. Several public policy actions are based on the information produced by IBGE on the Brazilian reality.

In order to produce statistical and geo scientific information, IBGE is present countrywide, with units at headquarters, in Rio de Janeiro, and in state and municipal levels, with the following composition: Collegiate bodies of senior direction: Technical Council, Board of Trustees, Board of Directors; Channels of direct and immediate assistance to the President: Cabinet, Attorney General; Sectional bodies: Internal Audit, Executive Board; Specific individual organs. Directorate of Surveys, Directorate of Geosciences, Directorate of Informatics, Centre for Documentation and Information Dissemination, National School of Statistical Sciences, 27 State Units (26 state and Federal District), with 584 agencies to collect and disseminate data.

The production of statistics and geo scientific information is carried out by the Directorate of Geoscience and Directorate of Surveys.

These departments are supported by the Directorate of Informatics, which ensures the infrastructure of computer

hardware and software and data communication. The Centre for Documentation and Information Dissemination is in charge of the dissemination policy for the results of all surveys carried out by the institution, publicizing them online, including micro data, free of charge.

The Executive Board is accountable for planning, budget and overall coordination of IBGE's work.

The Directorate of Surveys is responsible for the production of social, economic and demographic statistics as well as for the production of synthesis to the System of National Accounts and Social indicators. It is also responsible for coordinating National Statistical System, systematically calling meetings with users and other producers of statistical information.

The Directorate of Geosciences is responsible for the production of geographical, geodetic and cartographic information, as well as those related to environmental and natural resources. It also coordinates the fundamentals Geodetic and Basic Cartography plans.

IBGE maintains the National School of Statistical Sciences, which offers the following courses: Bachelor of Science degree in Statistics, Post Graduate Diploma in Environmental Analysis and Land Management, Masters in Population Studies and Social Research and training programs for IBGE technicians.

The units of IBGE at headquarters are responsible for the design of surveys, analysis of results and coordination of the teams working at the national level.

The units of IBGE located throughout the national territory are responsible for the collection, review and submission of primary statistical data to headquarters.

These units also conduct field activities related to geodesy and cartography.

II. Work Program for the Production of Statistics

In 2012, IBGE has updated its Strategic Plan in order to set goals and targets for the future years. Thus, the Strategic Plan is the main instrument of governance of the institution.

The program of work and its schedule are discussed by all technical and infrastructure areas before being consolidated into IBGE'S Strategic Plan. This is submitted to the Planning Board, composed by IBGE's President and directors, which evaluates and approves it.

IBGE's Strategic Plan subsidizes the preparation of the Federal Government Multi-year Plan (PPA, in Portuguese) for the same period. The PPA covers all areas of government and describes the main objectives and goals for various organizations and ministries.

The institutional goals to be met in a semester have been set at the beginning of each semester. Institutional goals encompass the full range of publications planned for the period. These goals are approved by the Board and broadly disseminated, both internally and on the internet. They are an item in the objective evaluation of the institution's performance in accomplishing its mission.

IBGE's work program is presented to various Advisory Committees, which are composed of renowned members in the area, who discuss methodological issues and assist in setting priorities.

The Advisory Committees cover the following areas: Population Census, Agriculture Census; National Index of Consumer Prices; Mortality Statistics; Planning Control and Evaluation of Agricultural Statistics; Brazilian Regional Accounts.

As the demands for information not included in the predetermined work program cannot be satisfied with the resources available, they are met through agreements with the concerned governmental entities, which fund additional surveys. Examples of additional surveys are those demanded by the Ministries of Health, Education and Social Development.

IBGE also cooperates with various ministries, such as the Ministry of Finance, and the Central Bank for the

preparation of National Accounts.

Annually, the Ministry of Labor provides IBGE with the Annual list of Social Information (RAIS), which consist of the set of administrative records used to update the Central Business Register (CEMPRE). This register is used to select the sample of enterprises for the Annual Economic Surveys, which has replaced the Economic Censuses since 1990's. To set their long their long term lines of work, IBGE hold regular meetings with producers and users of social, economic and territorial information. These meetings aim at preparing the revision and expansion of the General Plan of Statistical and Geographical Information, based on mobilization and consultation to producers and users of information, including governmental institutions, survey institutes, NGOs, Scientific associations, as well as technicians and researchers interested in the production, dissemination and use of information.

This action resulted in the preparation of a diagnosis of the state of the art of production of information in the sphere of public services and the mapping of gaps, identifying opportunities for improvement and demands for new information.

The growing demand for socioeconomic and demographic information, as well as the inclusion of new issues, requires research in shorter time intervals.

One solution to fit the statistical offices to this new reality has been the adoption of models that address a systematic conception, with the production of integrated information sources and databases.

The Integrated System of Household Surveys (SIPD) is integrated by the Continuous National Sample Survey of Household (PNAD-C) and the Household Budget Survey (POF). SIPD requires intensive contact with users and producers of information. In this sense, the steps in the development of SIPD have been presented in seminars and conferences sponsored by IBGE.

III. Social Statistics Committee

The Social Statistics Committee, which was established by Inter ministerial Decree n. °424, issued on December 6, 2007, is a forum for the discussion and evaluation of the demands of the Social Statistical System of the Country.

The following Ministries and Institutes are part of the Social Statistics Committee: Ministry of Social Development and the "Fight against Hunger" Food Programme;

Ministry of Education; Ministry of Planning, Development and Management; Ministry of Health; Ministry of Labor; Institute of Applied Economic Research - IPEA; Ministry of Justice and Citizenship; National Institute of Educational Studies and Research Anísio Teixeira - INEP; and Brazilian Institute of Geography and Statistics - IBGE.

The Social Statistics Committee is composed of the Managerial Committee, which is responsible for setting guidelines for the work of the committee, and the Executive Group, responsible for implementing such guidelines.

The work of the Social Statistics Committee has been following the guidelines below since 2009: Draw up the inventory of social statistics, especially the official ones, updating them regularly; Ensure and improve the comparability and accessibility of information; Encourage the adoption of concepts, classifications and methods for processing, storing and presenting official statistical information; Fill in information gaps and expand the integration of data sources; Organize the demand for information and coordinate their production and use; Regulate and facilitate access by various government agencies to existing databases, ensuring transparency, visibility and secrecy; Undertake actions in order to allow visibility to the work developed by the Committee; and Adopt the Fundamentals Principles of Official Statistics.

The Executive Group has carried out intensive work, such as the identification of data bases of several agencies, the preparation for standardized procedures for the project Metadata Bank at IBGE.

One of the main goals of the committee is to integrate the various database of social information derived from

surveys and administrative records, in order to promote the effective coordination and governance of the national statistical system.

IV. Municipal Commissions on Geography and Statistics

IBGE invests in strengthening the principle of transparency, allowing society to know and follow the development of its activities.

In this context, IBGE has expanded the operation area of the old Municipal Census Committees, which used to be created to function only when censuses were being carried out.

Municipal Commissions on Geography and Statistics (CMGE's, in Portuguese) have been created, from 2010 Brazilian Census, in order to broaden participation of local communities in the processes and dissemination of the studies, surveys and general maps developed by the institution.

The CMGEs include the participation of representatives from IBGE, as well as executive, legislative and judicial representatives of municipalities and representatives of other local civic organizations.

V. Technical Cooperation

The following nationwide technical cooperation may be highlighted: Ministry of Health; Ministry of Education; Ministry of Cities; Ministry of Social and Agrarian Development; Special Secretariat of Policies for Women and Special Secretariat for Human Rights at the Ministry of Justice and Citizenship; Ministry of Culture; National Justice Council (CNJ).

With regard to international technical cooperation agreements, the following work may be highlighted: Specialized Meeting on Statistics of MERCOSUR – the Cooperation Project in Statistics towards the integration MERCOSUR and the strengthening of its national and regional institutions through the development, improvement, harmonization and integration of the production and dissemination of statistics.

In the period of 2010-2015, IBGE has been conducting international technical cooperation agreement on technology and methodology on population and agricultural censuses; social, demographic and economic statistics with many countries.

VI. Interaction with the International Community

IBGE has extended its participation in the international Statistical community with United Nations Statistics Division - UNSD, the Statistical Conference of the Americas - SCA, the Conference of European Statistics - CES, the Organization for Economic Cooperation and Development - OECD, the World Tourism Organization - WTO, the International Labour Organization - ILO, the Community of Portuguese Speaking Countries - CPLP, BRICS, among others.

Brazil was elected chair of the United Nations Statistical Commission in its Forty-eighth session, on 7 March 2017.

VII. Courses and Conferences for the Press and General Users

In the last two decades, IBGE has expanded the role of communication and the relationship with the press, as an alternative way of publicizing its work and building its image and credibility before the public.

In press conferences, the release is available for participants at the beginning of the event. At the same time, indicators and commentary on survey results are published at the IBGE's website.

Besides structural surveys, IBGE monthly publishes about ten short term data. Thus approximately 100 press

conferences are held at IBGE a year.

The publication of the so-called short term data is regulated by Decree n. °355, issued on November 5, 2007, and signed by the Ministry of Planning. According to the decree, survey results must be sent to government officials at 7 a.m., i.e., two hours in advance of public access to the data, which happens at 9 a.m. As to access to information, IBGE releases, on this website, the list of state official who have the precedence over the public, a fact that ensures the transparency of the procedure.

Qualifying journalist is essential to improve the reports they write on IBGE surveys. In recent years, the Coordination of Social Communication (CCS) has organized several courses for journalists. Courses on more complex information were held (e.g. National account and census) as well as training for the use of digital tools that allow quick access to statistical information.

VIII. Access to the Internet and Other Access

IBGE provides several ways for accessing the information it produces, so that the public is better served: publications (books and periodicals) accompanied by CD-ROMs; free telephone consultation; a Central Library, located at the Centre for Documentation and Information Dissemination in Rio de Janeiro; a connection with the Department of Documentation and Information Dissemination at the IBGE State Units, located in all Brazilian state capitals.

IBGE provides electronic products and services that are the main media through which information such as: specific files with data on population, economy, cartography, geodesy, natural resources and environment in free access in the website (http://www.ibge.gov.br).

Besides the electronic publications the IBGE web page has two important databases to stand out: Aggregated Statistical Tables (SIDRA in Portuguese) - Database with information grouped in territorial level that allows the users to construct their own tables according and compare data to selected information; and Statistical Multidimensional Database (BME in Portuguese) – Database with micro data information that allows users to construct tables according to selected information and confidentiality constraints. This one requires Internet subscription.

ANNEXURE - II A BRIEF OVERVIEW OF THE STATISTICAL SYSTEM OF RUSSIA

Federal State Statistics Service (Rosstat) is the authority responsible for production of the official statistics on social, economic, demographic, ecological and other dimensions of society.

National statistical system in the Russian Federation is based on the principals of centralized structure. The main task of the national statistical system is to provide timely, comprehensive and objective information on the socio-economic development of Russia, its regions and economic sectors to the governmental authorities at all levels, media, scientific community, business entities, population and international organizations. In order to achieve this aim Federal plan of statistical works has been developed. It defines the main directions of statistical monitoring of socio-economic and demographical processes in the country. The Federal plan is worked out by Rosstat in cooperation with other governmental agencies and adopted by the Government of the Russian Federation.

Rosstat main functions are:

• to submit the official statistics in accordance with the established regulations to the President and the Government of the Russian Federation, Federal Assembly of the Russian Federation, other governmental entities, including regional authorities, media, legal entities and individuals, and also to international organizations;

 to develop and approve within its power the official statistical methodology for the federal statistical observation and official statistics production in accordance with the established regulations; to ensure that methodology complies with international standards and the UN Fundamental Principles of Official Statistics;

· to approve federal statistical observation forms and instructions on their completion;

• to coordinate activities in the field of official statistics while developing Federal plan of statistical works, proposals on its updating;

 to maintain, provide methodological support and conduct federal statistical observations and to process collected data;

 to develop and maintain national classifications of technical, economic and social data in accordance with the established regulations;

- to ensure within its power protection of confidential information received as a result of statistical observation;
- to provide users with official statistical and other information in accordance with established regulations;

• to implement internationally adopted statistical practices, gained from the membership of the Russian Federation in international organizations.

I. Statistical System: principles of organization

The national statistical system is a network of interacting governmental entities and bodies that collect, process and disseminate statistics, describing the pace of socio-economic and demographic development of the country.

The system is developed in accordance with the administrative territorial division of the country in order to ensure provision of comprehensive and objective statistics on socio-economic development of the Russian Federation, its regions, industries and economic sectors to the public authorities and all levels of government, the media, scientific community, business entities, public and international organizations.

The system comprises two organizational levels: federal, represented by Rosstat Head Office, and regional level, represented by Rosstat regional offices.

II. Federal level of the state statistics

Federal level of the state statistics involves Rosstat Head Office, Main Computing Centre, Scientific Research Institute for problems of socio-economic statistics, Scientific Research and Design and Technology Institute of Statistical information, Information and Publishing Center "Statistics of Russia".

III. Regional level of state statistics

Russian Federation is divided into 85 constituted entities (regions). In most of constituent entities (republic, oblast, autonomous area, territory) Rosstat has its regional office. Altogether there are 70 regional offices (as of July 2017).

Rosstat regional offices collect, process statistics, provide data to the republic, provincial and regional authorities and other users.

IV. Legal Basis of the official Statistical Activities

Federal State Statistical Service activities are regulated by the Constitution of the Russian Federation, federal laws, Decrees of the President and the Government of the Russian Federation, international treaties of the Russian Federation.

The basis of the statistical activities in Russia is the federal law "On official statistical accounting and the system of national statistics in the Russian Federation" of 2007 (as amended).

Carrying out of major statistical surveys, such as Population Census and Agricultural Census is supported by the specific federal laws.

In order to provide Rosstat with all necessary data aiming at creating national information resources, the Government of the Russian Federation issued an act on obligatory provision of primary statistical and administrative data.

V. Emerging challenges

Timely, accurate, reliable official statistics on social, economic, demographic, ecological and other dimensions of the society is vital for the country's socio-economic development and governance.

Nowadays the Russian statistical system is being developed in the environment of significant socio-economic changes, implementation of the international standards of financial data reporting. This transition defines the demand for new approaches in official statistics as well as creation of a flexible statistical information system, responding to changes occurring in the society.

Development of the statistical system is based on further technological modernization, implementation of new

planning and decision-making methods and improvement of human resources.

The principal aspect of Russian statistics modernization is higher transparency of statistical methodology and a broader access to official statistics for all users.

New approaches and the need to meet the growing information needs of the society, triggered adoption by the Government of the Russian Federation of the subprogram "Official statistics production" for the period until 2020 within the framework of the state program of the Russian Federation "Economic development and innovative economy".

The main tasks of the subprogram are:

- design and delivery of statistical data to users to the full extent, according to the Federal Statistical Work Plan;

- preparation, conduct of Russian censuses and summarizing of their results, taking various surveys and observations, optimization of statistical surveys and reduction of statistical burden;

- building basic input-output tables;

- modernization of the system of statistical data collection, processing, storage and dissemination by application of new information and telecommunication technologies.

ANNEXURE - III A BRIEF OVERVIEW OF THE STATISTICAL SYSTEM OF INDIA

India consisting of a number of States and Union Territories (UTs), has a federal structure of Government and the Indian Statistical System functions within the overall administrative set up of the country. The division of responsibility for administration between the Union Government and the State Governments is on the basis of threefold classification of all subjects, namely, the Union List, the State List, and the Concurrent List. The Concurrent list represents the subjects where both the Union and State Governments can operate, and it includes the subject Statistics. There is a further division of responsibility, by subjects or groups of subjects, among the different Ministries/Departments of the Union Government and among the Departments of State Government, on the basis of their administrative functions.

The Indian Statistical System, therefore, may be treated as both decentralized and centralized system. For example, the large-scale statistical operations conducted all over the country like Population Census, Economics Census, Agricultural Census and Livestock Census, as well as nation-wide sample surveys including the Annual Survey of Industries and the Socio-Economic Surveys are the responsibility of central agencies. Similarly, compilation of National Accounts, preparation of all-India Prices and Industrial production indices are also Central activities. In the case of States, the State statistical organisations collect and generate data on a number of variables. The Central Government acts as the coordinating agency for presentation of statistics on an all-India basis even in fields where the States have primary authority and responsibility of coordination of all statistical activities at the State level and keeping liaison with theMinistry of Statistics and Programme Implementation (MOSPI) at the Centre for the purpose of maintaining uniformity and consistency in the data produced and consolidated at different levels.

Statistical System at the Centre

The Ministry of Statistics and Programme Implementation (MOSPI) is the nodal agency for planning and facilitating the integrated development of the Statistical system in the country, including laying down norms and standards in the field of official statistics, evolving concepts and definitions, suggesting methodologies of data collection, processing and dissemination of results. The Ministry has two wings viz. National Statistics Office (NSO), commonly called 'Statistics Wing' and the 'Programme Implementation (PI) Wing'. The NSO consists of the Central Statistics Office (CSO) and the National Sample Survey Office (NSSO). The CSO includes Computer Centre also. The Programme Implementation Wing has three divisions viz. Twenty Point Programme Division, Infrastructure Monitoring Division, and Member of Parliament Local Area Development Division. In addition to a number of

publications brought out by the MOSPI, both NSO and PI wing generate a lot of statistical information which is used by policy planners, researches and other users. The MOSPI also has an autonomous Organisation viz. the Indian Statistical Institute (ISI) which is a premier statistical institute of international repute.

Besides the NSO, most of the line Ministries/Departments in the Union Government i.e. the Government of India, dealing with different subjects such as Agriculture, Water, Health, Rural Development sectors etc. have their own statistical establishments to perform statistical activities for the respective Ministries/ Departments, and they are generally headed by senior level statistical functionaries to facilitate proper coordination with NSO. Most of these Departments bring out respective statistical data/publications.

Central Statistics Office (CSO)

CSO is headed by two Director Generals designated as Director General (Economic Statistics) and Director General (Social Statistics). CSO is located in New Delhi. It consists of five major Divisions viz National Accounts Division (NAD), Economic Statistics Division (ESD), Social Statistics Division (SSD), Training Division and Coordination and Publication Division (CAP). In addition, CSO has a premier training institute called National Statistical Systems Training Academy (NSSTA) located near Delhi which has been conducting national/international statistical training programmes since its inauguration in February 2009.

The Central Statistics Office is responsible for coordination of statistical activities in the country, and evolving and maintaining statistical standards. Its activities mainly include National Income Accounting; conduct of Economic Census, processing of data collected through Annual Survey of Industries and preparation of Reports, compilation of Index of Industrial Production, as well as Consumer Price Indices, Gender Statistics, and imparting training on Official Statistics.CSO brings out a number of publications periodically including Statistical Year Book, India in figures, Energy Statistics, Infrastructure Statistics, Environment Statistics etc. besides disseminating statistical data to various national and international agencies. The other activities include preparation of Five Year Plan and Annual Plans in respect of statistical matters, holding conferences with the Central and State statistical agencies, revision of National Industrial Classification, preparation and implementation of Strategic Plans to make available data on key parameters, improving the quality and reliability of existing data sets, making available new data sets on emerging fields to meet increasing data demands, and, reducing time lag in dissemination of data.

The Computer Centre under CSO, handles the data processing jobs of the MOSPI, provides training to statistical personnel on software, disseminates unit level data, maintains the MOSPI's website (www.mospi.gov.in) and the National Data Warehouse of Official Statistics.

National Sample Survey Office (NSSO)

The NSSO functions under the overall direction of National Statistical Commission with requisite independence and autonomy in the matter of collection, processing and publication of NSS data. The NSSO is headed by the Director General and Chief Executive Officer (DG & CEO), who is also the Member-Secretary of the Steering Committee.

The National Sample Survey Office (NSSO) conducts large scale sample surveys including socio-economic surveys, Annual Survey of Industries, collection of price data for rural and urban sectors etc. besides carrying out sample checks on area enumeration and crop estimation surveys and preparation of the urban frames useful in drawing of urban samples. The major activities of the NSSO pertain to Survey Design, Field Operations, Processing of NSSO data and Publication of NSSO Reports.

Statistical System in the States

The Directorates of Economic and Statistics (DESs) in the States/UTs act as the nodal agencies for coordination of all statistical activities in the States/UTs.While the DES in most of the States/UTs have been formally declared by the State Governments as the Nodal Agencies for all statistical activities, the remaining few though not yet formally declared, continue to act as coordinating agency on statistical matters in the States /UT. Most of the States/UTs have District Statistics Offices (DSOs) which act as the field offices of the DESs for collection and compilation of statistical data for the districts. The DESs perform almost the same functions in the States/UTs as the NSO at the centre viz. bringing out some key statistics, coordination with the Central and State Statistical agencies, dissemination of statistics, etc.

Legal Support for Collection of Data

Data collection in India has been largely based on a voluntary response except for the statutory support provided through the erstwhile "Collection of Statistics Act, 1953' to collect industrial data. This Act has since been amended as the new 'Collection of Statistics Act 2008' which is much more comprehensive to enable collection of various socio-economic data. The Collection of Statistics Act 2008 is administered by the Ministry of Statistics and Programme Implementation while another Act viz. Census Act 1948 is administered by the Office of the Registrar General Of India under the Ministry of Home Affairs, to collect population and other demographic data. Besides the two important Acts, there are a number of other Acts, Rules and Procedures being administered by concerned subject Ministries/Departments, to collect statutory administrative returns which help in generating different subject related data.

Emerging challenges

The Indian Statistical system has played an important role in facilitating informed decision-making, and greatly contributed to planned social and economic development in the country. A large variety of data is produced by the statistical system and extensive statistical data bases have been created which help in meeting the data requirements of not only the internal agencies but also the international agencies, besides a large number of other users such as researchers. The system is undergoing steady transformation to meet ever increasing information needs following challenges arising out of the globalization and liberalization of economy. It involves many significant structural and operational changes in the statistical system both at the Centre and in the States. It includes constitution of National Statistical Commission (NSC) to revamp the statistical system in the country with a view to improve the credibility, timeliness and adequacy of data. A comprehensive India Statistical Strengthening Project (ISSP) is being implemented with the collaboration of the World Bank to strengthen the statistical system in the States/UTs, in addition to an extensive programme undertaken to strengthen statistical capacity and infrastructure at sub-state level.

Further, keeping in view the need to modernize the statistical system, there is an increasing thrust on deploying latest information and communication technology in data collection, data management and data dissemination for improving efficiency of statistical operations and activities. For example, e-collection of industrial and price data has been already in operation and e-system for the dissemination of various data including e-publicationis being used for wider and speedier access of such data. Steps are also being taken to accelerate e-governance to engage citizen's directly in the process of data sector reforms. Indeed, the official statistical system is relentlessly gearing up to meet growing aspiration of different stakeholders in the emerging fast-changing environment by providing requisite data as reliably and timely as possible, besides undertaking appropriate measures to upgrade statistical skills and capacity through elaborate training programmes and promoting coordination between Central and State statistical agencies.

ANNEXURE - IV A BRIEF OVERVIEW OF THE STATISTICAL SYSTEM OF CHINA

Since its establishment, National Statistical System of the People's Republic of China has been developed and improved in over 60 years' process of reform and adjustment to meet the demands for the new conditions and situation. The Statistical Law of the People's Republic of China stipulates that the State shall establish a centralized and unified statistical system, with a statistical administrative structure under unified leadership and with each level assuming responsibility for its own work.

The government statistical system comprises the government comprehensive statistical system and the government departmental statistical system. The government comprehensive statistical system is consisted of the statistical institutions established through a top-to-down model and relevant statistical staff from all the administrative levels. National Bureau of Statistics of China is established under the State Council, independent statistical institutions are established in local governments at and above the county level, and governments of townships and towns are staffed with full-time or part-time statisticians, who are responsible for the specific coordination and administration of the statistical work in their respective administrative areas. The government comprehensive statistical system adopts the management model as "unified leadership and decentralized administration"

I. Government Comprehensive Statistical System

1) National Bureau of Statistics of China

As an organ directly under the State Council, the National Bureau of Statistics of China (NBS) is responsible for directing and coordinating the statistical work throughout the country and national economic accounts. In the entire national statistical system, NBS is a main provider of national statistical data and a coordinator of the government departmental statistics and local statistics. Pursuant to the Statistics Law of the People's Republic of China, the main function of NBS is to be responsible for organizing, directing and coordinating the statistical work throughout the country, to formulate statistical policy and planning, basic national statistical system and unified statistical standards, approve the statistical standards of departments, draw up a plan or scheme for important general surveys of the national conditions and strength jointly with the departments concerned, organize and conduct the important general surveys of the national conditions and strength such as Population Census, Economic Census and Agricultural Census, organize and conduct the statistical survey of key industries of the economy, collect, aggregate, collate and provide the statistical data related to the surveys, and synthetically collate and provide the basic national statistical data, and to check, administer and publish the basic national statistical data and publish periodically the statistical data related to national economy and social development, and to administer the departmental and local statistical

survey programs by law.

NBS has, divided by professional and function, set up 18 administrative units at departmental level, 2 institutions operating as administrative units, 10 institutions (in Beijing) and China Statistics Press directly under NBS. According to the needs of its work, NBS establishes Survey Offices in each province (municipality, autonomous region) and a survey team in each city (prefecture, autonomous prefecture and league) and in one-third of counties (cities at county level, districts and banners), which are as agent organs of NBS and vertically administrated under NBS, and are mainly responsible for the surveys of key statistical data required for the macroeconomic control and national accounts assigned by NBS mainly through sampling surveys.

2) Local Bureau of Statistics

Independent statistical institutions are established in local governments at and above the county level, and statistical stations are established or statisticians are staffed in the people's governments of townships and towns, who are responsible for carrying out their tasks of national statistical surveys and for organizing, guiding and coordinating the statistical work in their respective administrative areas. The statistical institutions of local governments at various levels are subordinated to the dual leadership of the governments at their level and the statistical institutions at higher level, in terms of statistical work, mainly under the leadership of the statistical institutions at higher level.

II. Departmental Statistical System

Other ministries of the State Council and departments of local governments at various government levels do, according to the needs of their statistical work, establish statistical institutions and staffed with statisticians, forming a departmental statistical system. Its main function is to organize and coordinate the statistical work within the departments, to execute the tasks of State and local statistical surveys, to draw up and carry out statistical survey plans within the departments and to collect, compile and provide statistical data, to make statistical analysis and exercise statistical supervision over the implementation of plans of the departments and of the enterprises or institutions under their jurisdiction. As a main system of statistical work, the national statistical system has the power to direct and coordinate the statistical work in this departmental statistical system.

III. Statistical Laws and Regulations

Whether statistical institutions or statistical set-ups in enterprises and institutions, must comply with the national statistical laws and regulations and conduct statistical surveys according to the statistical indicator systems and statistical survey methodologies formulated by NBS.

Statistical legal system in China comprises the statistics law ("Statistics Law of the People's Republic of China"), administrative regulations (including Regulations on Implementation of the Statistical Law, Regulations for Census and Regulations for Customs Statistics), administrative rules, regulatory documents (including the Interim Measures for Survey Programs of Departmental Statistics, the Measures for Administration on Foreign-Related Surveys and the Measures for Administration on Approval of Statistical Surveys) and local statistical regulations and rules. Pursuant to the Statistics Law of the People's Republic of China, the national statistical survey programs are worked out by NBS, or jointly with the relevant ministry or ministries of the State Council, and are submitted to the State Council for documentation, but important programs shall be reported to the State Council for examination and approval. Statistical survey programs of departments are worked out by the relevant ministries or departments of the State Council and are reported to the statistical institutions at the same level for documentation or examination and approval. Local statistical survey programs are worked out by the statistical survey programs at the same level for documentation or examination and approval. Local statistical survey programs are worked out by the statistical institutions of local governments at

and above the county level, or by the statistical institutions of local people's governments at and above the county level jointly with the relevant department or departments, and shall all be reported to the statistical institutions at the higher level for documentation or examination and approval. In drawing up a plan for statistical survey programs, it is necessary to draw up an appropriate statistical survey system simultaneously, which shall be reported for examination and approval or for documentation. A statistical survey system shall stipulate survey objective, scope and coverage, methods, respondents, organization, forms or questionnaires, and submission and release of statistical data. A statistical survey shall be organized and conducted under a statistical survey system approved. Any change of the contents of statistical survey system shall be submitted to the original examination and approval authority for approval, or to the original registration authority for documentation.

IV. Statistical Survey

NBS collects statistical data mainly through periodical censuses and current statistical surveys, and sorts out statistical data through ad hoc surveys, typical surveys and administrative registry records. At present, the important general surveys of the national conditions and strength by NBS include Population Census, Agricultural Census and Economic Census, and 47 current statistical surveys, including national accounts, agriculture, industry, energy, investment, construction, trade and external economy, services, urban and rural households, price, society and science and technology, labor force, wages and salaries, etc., are organized and conducted. These surveys cover main aspects of economy, society, population, environment and resources. The contents of both the censuses and surveys basically cover all the aspects concerning with economy, society, population, environment and resources.

The government departmental statistics involve traffic, tourism, finance, banking, import and export in customs, utilization of foreign capital, culture, education, health, science and technology, registry of permanent residence, social development, etc.

V. Release of Statistics and Provision of Statistical Products

In order to provide the official statistics and products on China to the whole society and international community more in quantity, shorter in time lag, and better in quality, NBS releases statistical survey data and supplies with value added products via statistical processing through various channels and in various ways. For the time being, a system of regular releases of statistical information has been established, including various well-incorporated types, such as press conference, internet release, public data bank and publications, "Statistics Info" through WeChat and official mobile information service platform, as well as the paper products mainly of varieties of yearbooks, which enable the release and provision of statistical data and products more efficient in time, richer in contents and more extensive in coverage of audience.. In addition, the statistical institutions in 31 provinces, autonomous regions and municipalities, as well as many cities and counties have also formed their own relevant regular patterns for timely data release, which forms a hierarchical and widely covered layout for statistical data release and provision in China.

VI. The Main Targets and Latest Development of China's Statistics

China Economy is at an important stage of development to the escalation of structural transformation. The fast development and profound change in China's socio-economy have posed newer and higher requirements on the statistical system in China. Since 2012, with its great efforts on reform of the statistical production modes, NBS has preliminarily established a true, complete and timely updated database of establishments; worked out a standardized system of integrated questionnaires for business surveys; developed a comparatively convenient and applicable data collection and processing software; and built up a comparatively safe and efficient online reporting system for

business statistics used all over China. With its open attitude and innovative courage, the National Statistical System in China is actively promoting the reform on unified accounts for GDP, exploring the methodologies for a national balance sheet of assets and liabilities, and measurement of green development indicators. In order to reflect the new driving forces for economic development, and show the performance of Mass Entrepreneurship and Innovation Policy on boosting economic development, China has undertaken to monitor statistics on new industries, new business formats and new business modes, built up and perfected relevant statistical standards for better serving the socio-economic development, at the same time, actively pushed forward the information sharing among various departments, and deeply explored big data treasure by taking advantage of registry records and survey data from other departments. Thereby, the role of the big data can be developed in terms of current statistics from reference, supplement to substitution. Statistics China will continuously improve the statistical system and methodology with its unremitting efforts, more extensively make use of modern information technology, continuously expand the statistical service channel, upgrade service quality and build up an advanced statistical survey system, which enables data quality better ensured , and the socio-economic development better served.

ANNEXURE - V A BRIEF OVERVIEW OF THE STATISTICAL SYSTEM OF SOUTH AFRICA

The South African Statistical system is nearly 100 years old, but has only served the needs of all its peoples for a relatively short period. The advent in 1994 of the democratic dispensation provided the production of statistics with two organizational model options for transformation. The first model was to centralize the production of most of the statistics into a single agency, the national statistical office (NSO) which was the then Central Statistical Service (CSS). The CSS was later transformed into Statistics South Africa (Stats SA) consisting of a head office and branches in the provinces, and much later on regional offices were established at sub-provincial level. The minority of the statistics excluded from centralization were largely of a financial nature such as the balance of payments. These would be generated by the relevant agencies including the South African Reserve Bank (SARB) and the National Treasury (NT). Indeed the feeling that centralization was the way to go was prevalent both within Stats SA and in other organs of state .The second model was to decentralize the production of most of the statistics whereby the various organs of state would produce statistics on the basis of their specialist subject areas. Naturally statistics-producing organs of state would constitute a statistical production system which would require coordination .The model ultimately adopted was a product of an evolutionary process. Statistical production faced five major pressures which overlapped in some areas. First was ideological transformation from a focus on "own affairs" of the apartheid political dispensation to a focus on integration of the total population and geography of the new state. This translated into transformation of the demographics of the CSS, integration of the Bantustan statistics offices into the CSS, and establishment of provincial CSS offices to facilitate data collection by head office. Second was the data gap facing the new government with regard to policy and programme development. Alleviation of poverty and inequality, especially service delivery, and the provision of developmental opportunities were unquestionably urgent. This provided the imperative for the 1996 census of population and housing. Third was the rationalization of the statistical series produced so they could be relevant to the aspirations of the citizenry. The rationalization included the introduction of the production of social statistics in addition to the existing economic statistics. Fourth was the drive to improve the quality of the statistics produced by the NSO. Fifth was the skills deficit across the statistics system to produce high quality statistics.

Although they are still around at different levels of intensity, the pressures mentioned above were most intense during, and coincided with, the tenure (1995-99) of the first head of the CSS which later became Stats SA. During this period the transformation model of statistical production was the centralize done. However, overtime it had become increasingly clear that Stats SA had very limited capacity to cater for most statistical needs of users. In the same breath the potential of other organs of state for filing the gap between what Stats SA produced and what users needed was recognized. New statistical legislation was introduced and the current Statistics Act (No. 6 of 1999) was

promulgated in 1999. The Act specifically provided for Statistician –General as executive head of Stats SA as well as coordinator of statistics produced by other organs of state. It was a land marking for the production of statistics in the country because it defined a new direction for the strategic and work programmes of Stats SA as well as defining the role of other organs of state in the production of statistics. Incidentally the Act coincided with the change of name of the NSO from CSS to Stats SA.

In 2000 a new head took over the reins at Stats SA and immediately embarked on a new vision for statistical production in the country. Although the new vision was as yet to be formally defined, it was hinged on coordination of statistical production. A National Statistics Systems Division (NSSD) was established at Stats SA to tease out the coordination process. The NSS concept was adopted by a Cabinet Lekgotla in January 2002. Although the SANSS was included in the Programmes of Action (POA) of the government, for the next eight years or so it lacked prominence especially at Stats SA for three main reasons. First was the relatively perennial capacity constraint. Second and most significant was the continued pressure to get Stats SA as an entity to work more effectively and efficiently with particular regard to the quality of its own products. The third was the challenge of change management.

It was not until 2009 that the NSS concept influenced the strategic direction of Stats SA. Since then the department's five-year strategic plan and the annual work programme have undergo a strategic shift that emphasizes implementation of statistical coordination as mandated by section 14 of the Statistics Act . As its new vision and mission indicated, the department assumed a leadership position by partnering with other organs of state to advance statistical development in the county. The shift has been widening statistical production beyond the product of Stats SA to setting up a system to support other organs of state to produce statistics of good quality. Building on the strategic gains made in the five year strategy (2009 - 2014) Stats SA changed its strategic focus for the period 2015 - 2019 to "use" of statistical information for Transparency, Accountability, Results-based management and Transformation.

The organisation has set the following strategic outcome goals to be achieved by 2030:

Firstly, our statistical information system will have fully responded to the information demands of the National Development Plan (NDP) that informs development and transformation consistent with the mandate of our Constitution.

Secondly, the national statistics system will be driven by a diverse, transformed and united cadre of professionals imbued with the statistical capability to lead the national statistical system. The statistical literacy of citizens and statistical capability in the national statistics system will have increased. School leavers will be better equipped to understand statistical concepts and it application in their daily lives. A new generation of statistical leaders will have been grown to head statistical information systems in the National Statistics System (NSS). A true data revolution will inspire us.

Thirdly, Stats SA will be a top-performing organ of state and an employer of choice. Technology will drive an end-to-end robust statistical production system. Our governance and statistical systems are flexible, efficient and innovative, underpinned by sound governance and statistical methodologies.

Fourthly, Stats SA will be the statistical authority at the heart of the NSS. Collaborative partnerships and statistics units will be established within organs of state under the statistical leadership of the Statistician-General. The production of statistics has now become part of the annual performance plans of organs of state and is used for decision-making by all to inform policy, planning, monitoring and evaluation. Users and the public are delighted and have confidence and trust in official statistics as it is common knowledge and practice that statistics produced in the NSS are based on statistical quality principles and international best practices.

Fifthly, by 2020, the statistics value chain will be based on sound statistical quality principles in line with international standards and classifications that engender trust in our products.

In order to address the major measure measurement requirements, both at national and international levels, Stats SA will be revamping its statistics legislation in South Africa.

Carnival Samba

The most famous dance is carnival samba, a Brazilian dance with African influences. The samba remains a popular dance in not only carnival but also considered one of the main Brazilian popular cultural manifestation, which involves music, dance, poetry and certain musical instruments.

Kalinka

"Kalinka" is performed both in a fast and slow pace at the same time and combines traditional elements of the Russian folk dance. Khorovods, dance in a squat, stomping with feet, clapping hands - all this can be seen in the dance "Kalinka".

Kathakali

Kathakali is one of the major forms of classical Indian dance. It is another "story play" genre of art, but one distinguished by its elaborately colorful make-up, costumes and face masks wearing actor-dancers. A Kathakali performance, like all classical dance arts of India, includes music, vocal performers, hand and facial gestures to express ideas, and footwork. However, Kathakali differs in its style and incorporates movements from the ancient martial arts and athletic traditions of south India. The traditional themes of the Kathakali are folk mythologies, religious legends and spiritual ideas from the epics.

Ansai Waist Drum

Ansai Waist Drum is a traditional folk dance originated from Shaanxi Province of China, with a history of over 2000 years. It is harmoniously mixed with Yangko (a popular rural folk dance) and martial arts (Kongfu), performed by several to over one thousand people. With its grand magnificence and fascinating expressiveness, it has been called the Number One Drum Dance in the world. On May 20, 2006, Ansai Waist Drum was approved by the State Council being included in the first batch on the National List of Intangible Cultural Heritage.

Zulu dance

The Zulu dance is an important aspect of the Zulu culture. It is usually performed during traditional Zulu ceremonies such as, weddings, coming of age (umemulo), reed dance (umhlanga) and is accompanied by vibrant singing, clapping of hands and sometimes the beating of drums. When performing this dance, dancers lift their legs to the height of their head and bang them down hard against the ground. The dress code for performing the dance is determined by age, rank and gender and it is quite impressive when men and women are fully dressed in their traditional attire. The girls are usually bare-chested, wearing beads as ornaments and woollen skirts. The dance encourages building solidarity amongst the community.
